

GenEx

Software library for object detection in genetical analysis evaluation
Softwarová knihovna pro vyhledávání objektů při vyhodnocování genetických analýz

Application Programming Interface

J. Schier, B. Kovář, M. Kuneš

Institute of Information Theory and Automation of the AS CR
schier@utia.cas.cz

Supported from the TA01010931 project of the Technology Agency of the Czech Republic

Namespace Index

1.1 Packages

Here are the packages with brief descriptions (if available):

genex	9
genex.lib	10
genex.lib.filter	11
genex.lib.i18n	11
genex.lib.imagereader	11
genex.lib.output	11
genex.lib.params	12
genex.lib.thresholder	12

Chapter 2

Hierarchical Index

2.1 Class Hierarchy

This inheritance list is sorted roughly, but not completely, alphabetically:

genex.lib.filter.AbstractFilterFactory	15
genex.lib.filter.AreaCircFilterFactory	21
genex.lib.thresholder.AbstractThresholderFactory	17
genex.lib.thresholder.IJAutoThresholderFactory	82
genex.lib.thresholder.IJAutoThresholderFactory	82
genex.lib.thresholder.SnellThresholderFactory	124
genex.lib.thresholder.SnellThresholderFactory	124
genex.lib.params.ChannelInfo	32
genex.lib.GenExDefines.ChannelNames	35
genex.lib.ChannelStringMap	36
genex.lib.thresholder.CSVWriter	37
genex.DapiProcessor	43
genex.lib.ExtRoi	47
genex.lib.SignalRoi	118
genex.lib.filter.Filter	55
genex.lib.filter.AreaCircFilter	18
genex.lib.GenExDefines.Filters	56
genex.lib.output.FISHdata	57
genex.lib.GenExDefines	63
genex.GenexPipeline	72
genex.lib.GraphicsUtils	78
genex.lib.params.ImageDirInfo	83
genex.lib.imagereader.ImageReader	86
genex.lib.imagereader.FileImgReader	51
genex.lib.imagereader.FileImgReader	51
genex.lib.imagereader.ScreenImgReader	104
genex.lib.imagereader.ScreenImgReader	104
genex.lib.params.InputGuiMain	88
genex.lib.params.InputGuiUtils	90
link	
genex.lib.Dapi	39
genex.lib.ObjectFilter	95
genex.lib.params.ParamDefines	97
genex.lib.output.Results	98
genex.lib.imagereader.RGButils	99
genex.lib.Segmentation	108

genex.SignalProcessor	113
genex.lib.SignalStats	120
genex.lib.thresholder.Thresholder	125
genex.lib.thresholder.IJAutoThresholder	80
genex.lib.thresholder.IJAutoThresholder	80
genex.lib.thresholder.SnellThresholder	121
genex.lib.thresholder.SnellThresholder	121
genex.lib.Util	127
ImagePlus	
genex.lib.Channel	22
genex.lib.Dapi	39
genex.lib.SigChannel	109
genex.lib.thresholder.SnellThresholder	121
genex.lib.thresholder.SnellThresholder	121
Iterator	
genex.GenexIterator	66
ListResourceBundle	
genex.lib.i18n.GenExBundle	58
genex.lib.i18n.GenExBundle_cs_CZ	60
genex.lib.i18n.GenExBundle_en_US	61
MouseListener	
genex.lib.RoiLabeler	101
PlugIn

GenExParams_	70

Chapter 3

Class Index

3.1 Class List

Here are the classes, structs, unions and interfaces with brief descriptions:

genex.lib.filter.AbstractFilterFactory	15
genex.lib.thresholder.AbstractThresholderFactory	17
genex.lib.filter.AreaCircFilter	18
genex.lib.filter.AreaCircFilterFactory	21
genex.lib.Channel	
Single channel representation	22
genex.lib.params.ChannelInfo	32
genex.lib.GenExDefines.ChannelNames	35
genex.lib.ChannelStringMap	36
genex.lib.thresholder.CSVWriter	37
genex.lib.Dapi	39
genex.DapiProcessor	43
genex.lib.ExtRoi	47
genex.lib.imagereader.FileImgReader	51
genex.lib.filter.Filter	55
genex.lib.GenExDefines.Filters	56
genex.lib.output.FISHdata	57
genex.lib.i18n.GenExBundle	58
genex.lib.i18n.GenExBundle_cs_CZ	60
genex.lib.i18n.GenExBundle_en_US	61
genex.lib.GenExDefines	63
genex.GenexIterator	66
GenExParams_	70
genex.GenexPipeline	72
GenExPlugin_	
Plugin entry class	76
genex.lib.GraphicsUtils	78
genex.lib.thresholder.IJAutoThresholder	80
genex.lib.thresholder.IJAutoThresholderFactory	82
genex.lib.params.ImageDirInfo	83
genex.lib.imagereader.ImageReader	86
genex.lib.params.InputGuiMain	88
genex.lib.params.InputGuiUtils	90
genex.lib.ObjectFilter	95
genex.lib.params.ParamDefines	97
genex.lib.output.Results	98
genex.lib.imagereader.RGButils	99
genex.lib.RoiLabeler	101

genex.lib.imagereader.ScreenImgReader	104
genex.lib.Segmenation	108
genex.lib.SigChannel	
Channel-specific methods for hybridization signals, extends the Channel class	109
genex.SignalProcessor	113
genex.lib.SignalRoi	118
genex.lib.SignalStats	120
genex.lib.thresholder.SnellThresholder	
Implementation of Violet Snell segmentation	121
genex.lib.thresholder.SnellThresholderFactory	124
genex.lib.thresholder.Thresholder	125
genex.lib.Util	127

5.8 Package genex.lib.thresholder

Classes

- interface [AbstractThresholderFactory](#)
- class [CSVWriter](#)

- class [IJAutoThreshold](#)
- class [IJAutoThresholdFactory](#)
- class [SnellThreshold](#)

Implementation of Violet Snell segmentation.

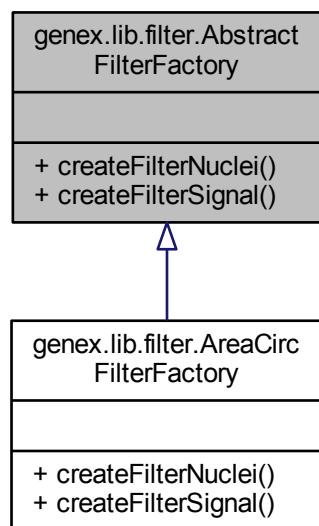

- class [SnellThresholdFactory](#)
- interface [Threshold](#)

Chapter 6

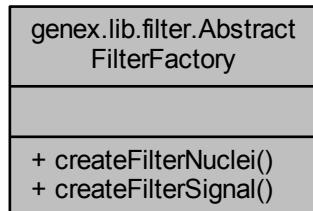

Class Documentation

6.1 genex.lib.filter.AbstractFilterFactory Interface Reference

Inheritance diagram for genex.lib.filter.AbstractFilterFactory:

Collaboration diagram for genex.lib.filter.AbstractFilterFactory:

Public Member Functions

- Filter [createFilterNuclei \(\)](#)
- Filter [createFilterSignal \(\)](#)

6.1.1 Member Function Documentation

6.1.1.1 Filter [genex.lib.filter.AbstractFilterFactory.createFilterNuclei \(\)](#)

Implemented in [genex.lib.filter.AreaCircFilterFactory](#).

6.1.1.2 Filter [genex.lib.filter.AbstractFilterFactory.createFilterSignal \(\)](#)

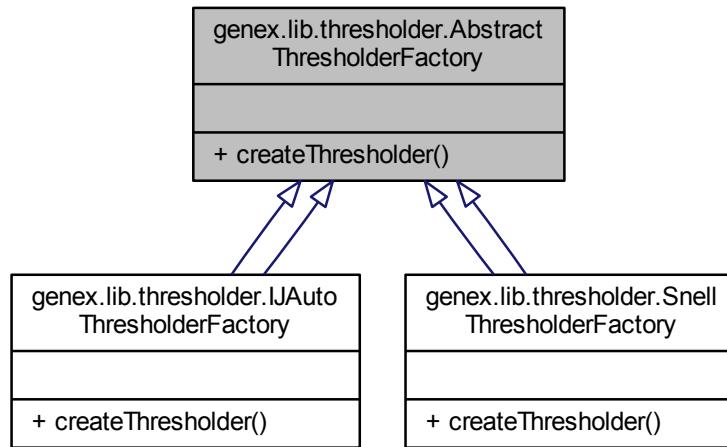

Implemented in [genex.lib.filter.AreaCircFilterFactory](#).

The documentation for this interface was generated from the following file:

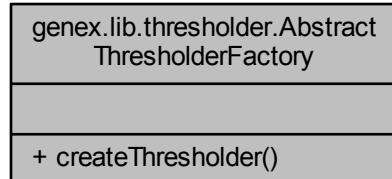

- src/genex/lib/filter/[AbstractFilterFactory.java](#)
-

6.2 genex.lib.thresholder.AbstractThresholdFactory Interface Reference

Inheritance diagram for genex.lib.thresholder.AbstractThresholdFactory:

Collaboration diagram for genex.lib.thresholder.AbstractThresholdFactory:

Public Member Functions

- `Thresholder createThresholder ()`

6.2.1 Detailed Description

Abstract factory for the thresholder methods.

Author

J. Schier

6.2.2 Member Function Documentation

6.2.2.1 Thresholder genex.lib.thresholder.AbstractThresholdFactory.createThresholder()

Create thresholder instance

Returns

Thresholder

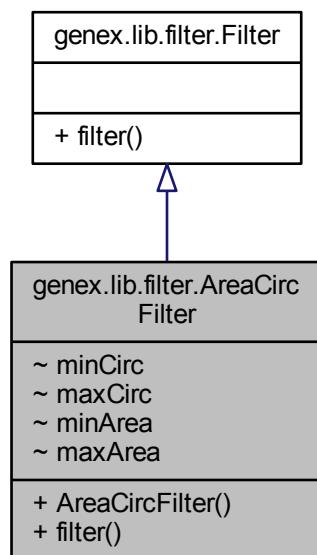

Implemented in [genex.lib.thresholder.IAutoThresholdFactory](#), and [genex.lib.thresholder.SnellThresholdFactory](#).

The documentation for this interface was generated from the following file:

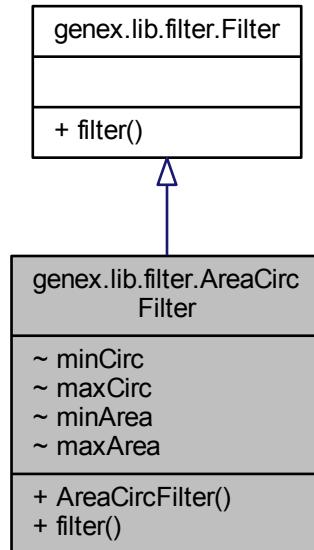

- src/genex/lib/thresholder/[AbstractThresholdFactory.java](#)

6.3 genex.lib.filter.AreaCircFilter Class Reference

Inheritance diagram for genex.lib.filter.AreaCircFilter:

Collaboration diagram for genex.lib.filter.AreaCircFilter:

Public Member Functions

- `AreaCircFilter (int minArea, int maxArea, double minCirc, double maxCirc)`
- `void filter (ArrayList< ExtRoi > rois, ResultsTable results)`

Package Attributes

- `final double minCirc`
- `final double maxCirc`
- `final int minArea`
- `final int maxArea`

6.3.1 Constructor & Destructor Documentation

6.3.1.1 `genex.lib.filter.AreaCircFilter (int minArea, int maxArea, double minCirc, double maxCirc)`

6.3.2 Member Function Documentation

6.3.2.1 `void genex.lib.filter.AreaCircFilter.filter (ArrayList< ExtRoi > rois, ResultsTable results)`

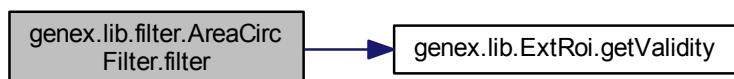

Filter list of `ExtRoi` by area and circularity, as set by class constructor. The result (boolean valid{invalid}) is, for each particle, stored into the corresponding `ExtRoi` parameter and to the the results table, column "Valid", in the row with label corresponding with the roi name. `ExtRoi` class is used.

Parameters

<i>results</i>	results table
<i>extRoi</i>	input roi (see (ExtRoi)

Implements [genex.lib.filter.Filter](#).

Here is the call graph for this function:

6.3.3 Member Data Documentation

6.3.3.1 `final int genex.lib.filter.AreaCircFilter.maxArea` [package]

6.3.3.2 `final double genex.lib.filter.AreaCircFilter.maxCirc` [package]

6.3.3.3 `final int genex.lib.filter.AreaCircFilter.minArea` [package]

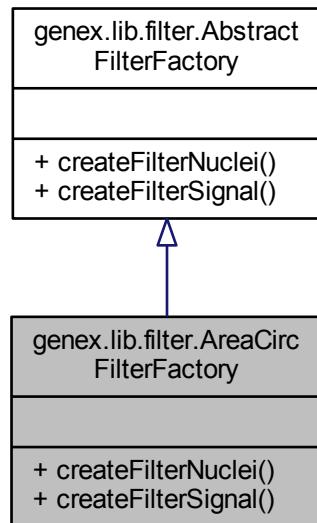

6.3.3.4 `final double genex.lib.filter.AreaCircFilter.minCirc` [package]

The documentation for this class was generated from the following file:

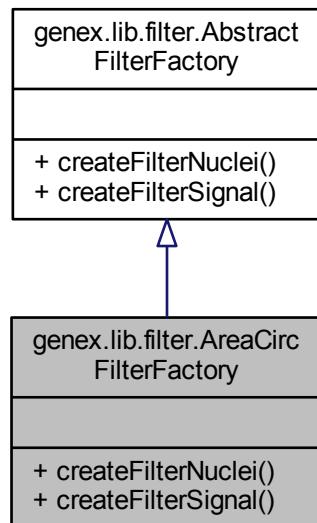

- [src/genex/lib/filter/AreaCircFilter.java](#)
-

6.4 genex.lib.filter.AreaCircFilterFactory Class Reference

Inheritance diagram for genex.lib.filter.AreaCircFilterFactory:

Collaboration diagram for genex.lib.filter.AreaCircFilterFactory:

Public Member Functions

- [Filter createFilterNuclei \(\)](#)
- [Filter createFilterSignal \(\)](#)

6.4.1 Member Function Documentation

6.4.1.1 Filter genex.lib.filter.AreaCircFilterFactory.createFilterNuclei ()

Implements [genex.lib.filter.AbstractFilterFactory](#).

6.4.1.2 Filter genex.lib.filter.AreaCircFilterFactory.createFilterSignal ()

Implements [genex.lib.filter.AbstractFilterFactory](#).

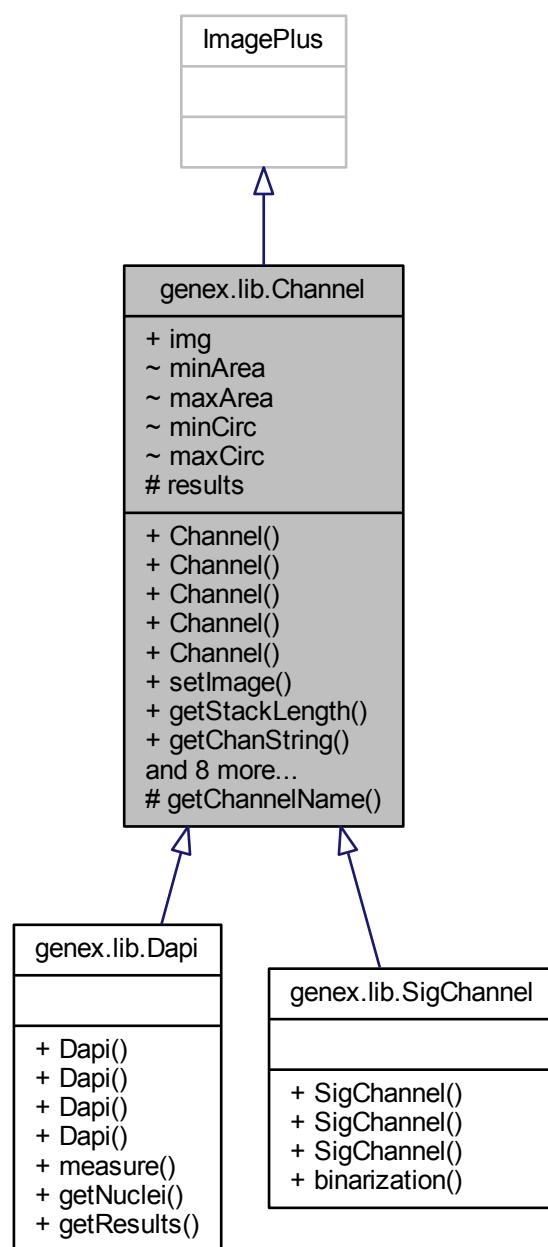

The documentation for this class was generated from the following file:

- [src/genex/lib/filter/AreaCircFilterFactory.java](#)

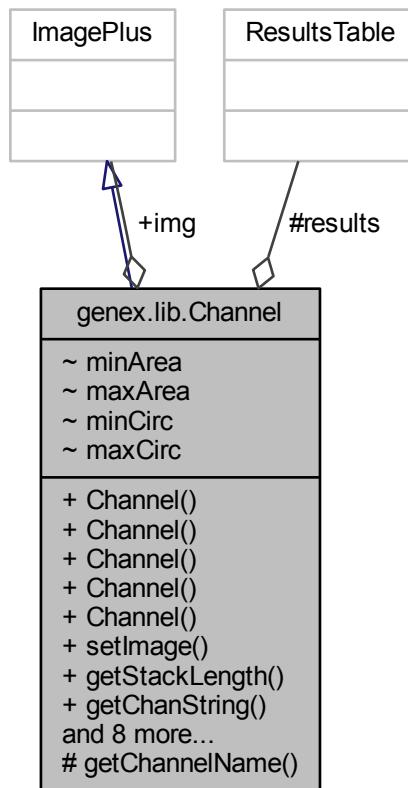

6.5 genex.lib.Channel Class Reference

Single channel representation.

Inheritance diagram for genex.lib.Channel:

Collaboration diagram for genex.lib.Channel:

Public Member Functions

- `Channel (ImageStack[] stack, String channelName)`
- `Channel (ImageStack[] stack, GenExDefines.ChannelNames channel)`
- `Channel (ImagePlus image, String name)`
- `Channel (String name)`
- `Channel (ImagePlus img, ChannelNames channel)`
- `void setImg (final ImagePlus img)`
- `int getStackLength ()`
- `String getChanString (ChannelNames channel)`
- `String getChanString ()`
- `ImagePlus denoise (final Filters filtGaussian)`
- `void normalizeIntensity (final int maxIntensity)`
- `void preprocessing (final Filters filtMedian, final boolean despeckle, final int radiusBackground)`
- `void showBinary ()`
- `ArrayList< ExtRoi > analyzeParticles (final int measurements, final int minArea, final int maxArea, final double minCirc, final double maxCirc)`
- `ImagePlus getBinImg ()`
- `void setBinImg (ImagePlus binImg)`

Public Attributes

- ImagePlus `img`

Protected Member Functions

- `ChannelNames getChannelName ()`

Protected Attributes

- `ResultsTable results = new ResultsTable()`

Package Attributes

- `int minArea`
- `int maxArea`
- `double minCirc`
- `double maxCirc`

6.5.1 Detailed Description

Single channel representation.

methods for selection of a channel from the input RGB image. preprocessing methods, background correction

6.5.2 Constructor & Destructor Documentation

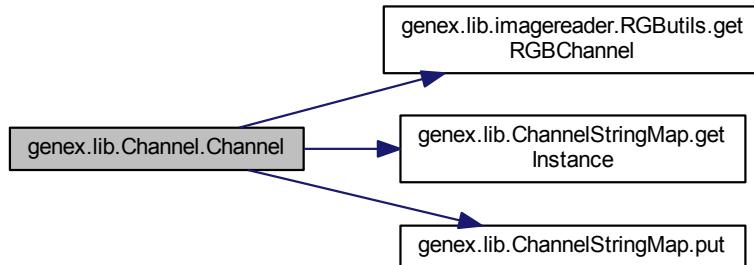

6.5.2.1 `genex.lib.Channel.Channel (ImageStack[] stack, String channelName)`

Selects channel from the input RGB stack.

Parameters

<code>stack</code>	input stack of RGB images (from microscope)
<code>channelName</code>	"RED"/"GREEN"/"BLUE" color of the selected channel

Here is the call graph for this function:

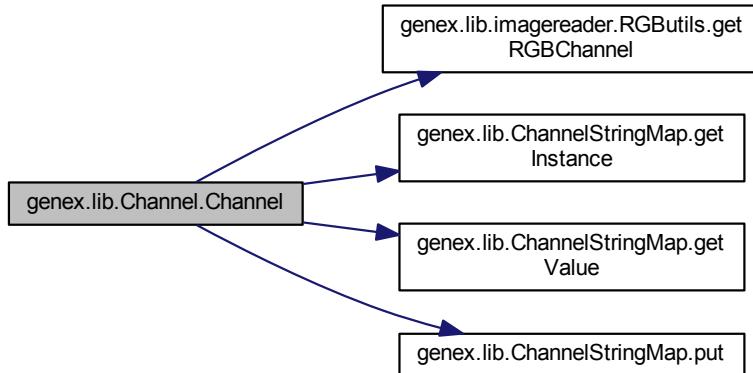

6.5.2.2 genex.lib.Channel.Channel (`ImageStack[] stack`, `GenExDefines.ChannelNames channel`)

Selects channel from the input RGB stack.

Parameters

<i>stack</i>	input stack of RGB images (from microscope)
<i>channel</i>	RED/GREEN/DAPI selected channel GenExDefines.ChannelNames

Here is the call graph for this function:

6.5.2.3 `genex.lib.Channel.Channel (ImagePlus image, String name)`

Constructs the [Channel](#) object from a single input image.

Parameters

<i>image</i>	input image
<i>name</i>	channel name

6.5.2.4 `genex.lib.Channel.Channel (String name)`

Assign name to the [Channel](#) object

Parameters

<i>name</i>	channel name
-------------	--------------

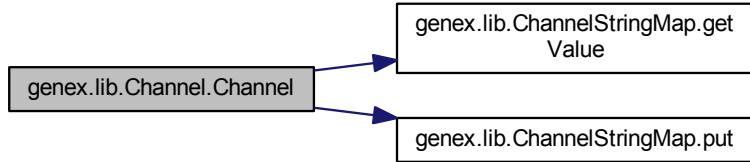

6.5.2.5 `genex.lib.Channel.Channel (ImagePlus img, ChannelNames channel)`

Constructs the [Channel](#) object using the input image and channel identifier

Parameters

<i>img</i>	input image
<i>channel</i>	channel identifier GenExDefines.ChannelNames

Here is the call graph for this function:

6.5.3 Member Function Documentation

6.5.3.1 ArrayList<ExtRoi> genex.lib.Channel.analyzeParticles (final int *measurements*, final int *minArea*, final int *maxArea*, final double *minCirc*, final double *maxCirc*)

ImageJ Particle analysis

Parameters

<i>measurements</i>	measurements to be performed, as defined by http://imagej.nih.gov/ij/developer/api/ij/measure/Measurements.html
<i>minArea</i>	minimum area of particles
<i>maxArea</i>	maximum area of particles
<i>minCirc</i>	minimum circularity of particles
<i>maxCirc</i>	maximum circularity of particles

Returns

6.5.3.2 ImagePlus genex.lib.Channel.denoise (final Filters *filtGaussian*)

Implements selection of single channel from the RGB input stack.

Parameters

<i>stack</i>	input stack of RGB images
<i>channelName</i>	channel selector ("RED"/"GREEN"/"DAPI"/"BLUE")

Returns

selected channel (ImagePlus) or null if the selector is not valid Implements selection of single channel from the RGB input stack.

Parameters

<i>stack</i>	input stack of RGB images
<i>channelName</i>	channel selector ("RED"/"GREEN"/"DAPI"/"BLUE")

Returns

selected channel (ImagePlus) or null if the selector is not valid Noise supression by deconvolution with a Gaussian kernel or median filter.

Parameters

<i>filtGaussian</i>	defined in GenExDefines
---------------------	---

Returns

denoised image

6.5.3.3 ImagePlus genex.lib.Channel.getBinImg ()**Returns**

binary image

6.5.3.4 ChannelNames genex.lib.Channel.getChannelName () [protected]**Returns**

channel descriptor as defined by [GenExDefines.ChannelNames](#)

6.5.3.5 String genex.lib.Channel.getChanString (ChannelNames channel)

Convert channel descriptor as defined by [GenExDefines.ChannelNames](#) to channel name (String) "DAPI"/"GREEN"/"RED"

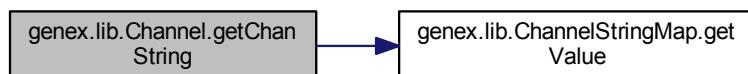

Parameters

<i>channel</i>	channel descriptor
----------------	--------------------

Returns

channel name

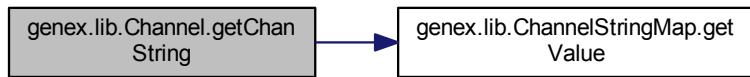

Here is the call graph for this function:

**6.5.3.6 String genex.lib.Channel.getChanString ()**

Returns

channel name (String) "DAPI"/"GREEN"/"RED"

Here is the call graph for this function:

**6.5.3.7 int genex.lib.Channel.getStackLength ()****Returns**

number of images to process before saving results Set number of images to process before saving results

Parameters

<i>nImages</i>

Returns

stack length - number of images to process

6.5.3.8 void genex.lib.Channel.normalizeIntensity (final int *maxIntensity*)

Non-linear intensity normalization. Estimates background threshold as image mean + 3*std and foreground threshold as mean + 7*std. If the image max intensity is between foreground threshold and *maxIntensity* parameter, everything above background threshold is scaled so that the max intensity reaches the *maxIntensity* value.

Parameters

<i>maxIntensity</i>	maximum required intesity
---------------------	---------------------------

6.5.3.9 void genex.lib.Channel.preprocessing (final Filters *filtMedian*, final boolean *despeckle*, final int *radiusBackground*)

Preprocessing: median filter, background correction with rolling ball filter

Parameters

<i>filtMedian</i>	filter type for denoising FILT_MEDIAN, FILT_GAUSSIAN, FILT_NONE
<i>despeckle</i>	use median filter with small radius (1.0) to despeckle
<i>radiusBackground</i>	filter radius for rolling ball background correction

6.5.3.10 void genex.lib.Channel.setBinImg (ImagePlus *binImg*)

Assign binary image to the channel

Parameters

<i>binImg</i>	
---------------	--

6.5.3.11 void genex.lib.Channel.setImage (final ImagePlus *img*)

6.5.3.12 void genex.lib.Channel.showBinary ()

Display binary image

6.5.4 Member Data Documentation

6.5.4.1 ImagePlus genex.lib.Channel.img

6.5.4.2 int genex.lib.Channel.maxArea [package]

6.5.4.3 double genex.lib.Channel.maxCirc [package]

6.5.4.4 int genex.lib.Channel.minArea [package]

6.5.4.5 double genex.lib.Channel.minCirc [package]

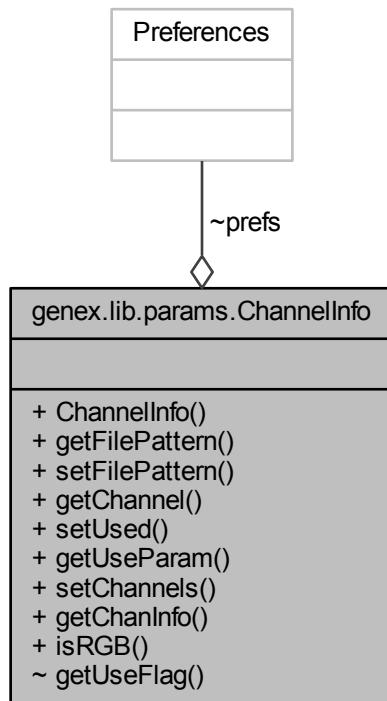

6.5.4.6 ResultsTable genex.lib.Channel.results = new ResultsTable() [protected]

-

6.6 genex.lib.params.ChannelInfo Class Reference

Collaboration diagram for genex.lib.params.ChannelInfo:

Public Member Functions

- `ChannelInfo (ChannelNames channel)`
- String `getFilePattern ()`
- void `setFilePattern (String filePattern)`
- `ChannelNames getChannel ()`
- void `setUsed (Boolean used)`
- void `getUseParam ()`
- void `setChannels (ArrayList< ChannelInfo > channelInfo)`
- `ArrayList< ChannelInfo > getChanInfo ()`
- Boolean `isRGB ()`

Package Functions

- Boolean `getUseFlag ()`

Package Attributes

- final Preferences `prefs` = Preferences.userRoot().node(`ParamDefines.PREFS_ROOT`)

6.6.1 Detailed Description

Class for storing information about channel parameters (channel usage, filename pattern, channel Id)

Author

J. Schier, B. Kovář

6.6.2 Constructor & Destructor Documentation

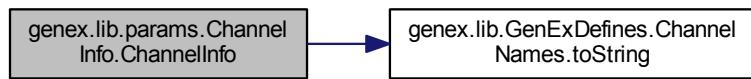

6.6.2.1 genex.lib.params.ChannelInfo (ChannelNames *channel*)

Constructor

Parameters

<i>channel</i>	channel identifier (see genex.lib.GenExDefines.ChannelNames)
----------------	---

Here is the call graph for this function:

6.6.3 Member Function Documentation

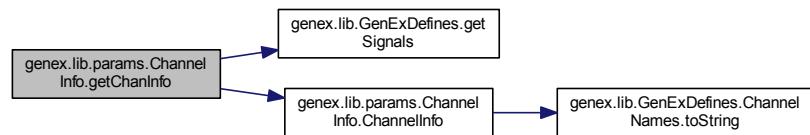

6.6.3.1 ArrayList<ChannelInfo> genex.lib.params.ChannelInfo.getChanInfo ()

Read information about channels from Preferences, populate [ChannelInfo](#) records

Returns

list of [ChannelInfo](#) records

Here is the call graph for this function:

6.6.3.2 ChannelNames genex.lib.params.ChannelInfo.getChannel ()

Get channel identifier

Returns

identifier (see [genex.lib.GenExDefines.ChannelNames](#))

6.6.3.3 String genex.lib.params.ChannelInfo.getFilePattern ()**Returns**

the file pattern of images belonging to channel

6.6.3.4 Boolean genex.lib.params.ChannelInfo.getUseFlag () [package]

Get the channel use flag

Returns

used

6.6.3.5 void genex.lib.params.ChannelInfo.getUseParam ()

Read use flag for the given [ChannelInfo](#) record from the Preferences

Here is the call graph for this function:

**6.6.3.6 Boolean genex.lib.params.ChannelInfo.isRGB ()****6.6.3.7 void genex.lib.params.ChannelInfo.setChannels (ArrayList< ChannelInfo > channelInfo)**

Set local channelInfo list to the list in parameter

Parameters

<i>channelInfo</i>	list of channel information records
--------------------	-------------------------------------

6.6.3.8 void genex.lib.params.ChannelInfo.setFilePattern (String filePattern)

Set file pattern for images belonging to the channel

Parameters

<i>filePattern</i>	the file pattern to set
--------------------	-------------------------

6.6.3.9 void genex.lib.params.ChannelInfo.setUsed (Boolean *used*)

Set the channel use flag

Parameters

<i>used</i>	the flag value
-------------	----------------

6.6.4 Member Data Documentation

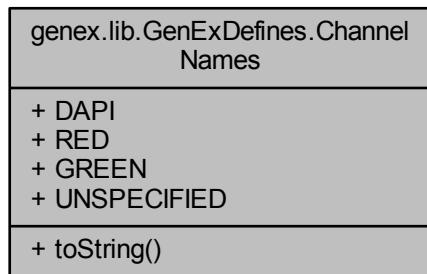

6.6.4.1 final Preferences genex.lib.params.ChannelInfo.prefs = Preferences.userRoot().node(ParamDefines.PREFS_ROOT) [package]

The documentation for this class was generated from the following file:

- `ResultsTable measure (final int measurements, final int minArea, final int maxArea, final double minCirc, final double maxCirc)`
- `ArrayList< ExtRoi > getNuclei ()`

- ResultsTable [getResults \(\)](#)

Additional Inherited Members

6.10.1 Detailed Description

Class for representation and processing of the DAPI channel [genex.lib.Channel](#)}

Author

J. Schier

6.10.2 Constructor & Destructor Documentation

6.10.2.1 genex.lib.Dapi.Dapi (`ImageStack[] stack, String channelName`)

Class constructor

Parameters

<code>stack</code>	input RGB image stack
<code>channelName</code>	channel to be extracted

6.10.2.2 genex.lib.Dapi.Dapi (`ImageStack[] stack, ChannelNames channel`)

Class constructor

Parameters

<code>stack</code>	input RGB image stack
<code>channel</code>	channel to be extracted GenExDefines.ChannelNames

6.10.2.3 genex.lib.Dapi.Dapi (`ImagePlus img`)

Class constructor

Parameters

<code>img</code>	single channel input stack, pointed by ImagePlus
------------------	--

6.10.2.4 genex.lib.Dapi.Dapi ()

6.10.3 Member Function Documentation

6.10.3.1 ArrayList<[ExtRoi](#)> genex.lib.Dapi.getNuclei ()

Returns

list of nuclei ([ExtRoi](#) [genex.lib.ExtRoi](#)) contained in the DAPI channel

6.10.3.2 ResultsTable genex.lib.Dapi.getResults ()

Returns

ResultTable DAPI results table (see <http://imagej.nih.gov/ij/developer/api/ij/measure/ResultsTable.html>)

6.10.3.3 ResultsTable genex.lib.Dapi.measure (final int *measurements*, final int *minArea*, final int *maxArea*, final double *minCirc*, final double *maxCirc*)

Analyze and measure the particles contained in the image

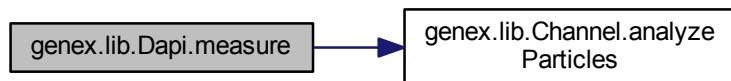

Parameters

<i>measurements</i>	the parameters to be measured
<i>minArea</i>	minimum area of the particles
<i>maxArea</i>	maximum area of the particles
<i>minCirc</i>	minimum circularity of the particles
<i>maxCirc</i>	minimum circularity of the particles

Returns

ImageJ result table (see <http://imagej.nih.gov/ij/developer/api/ij/measure/ResultsTable.html>)

Here is the call graph for this function:

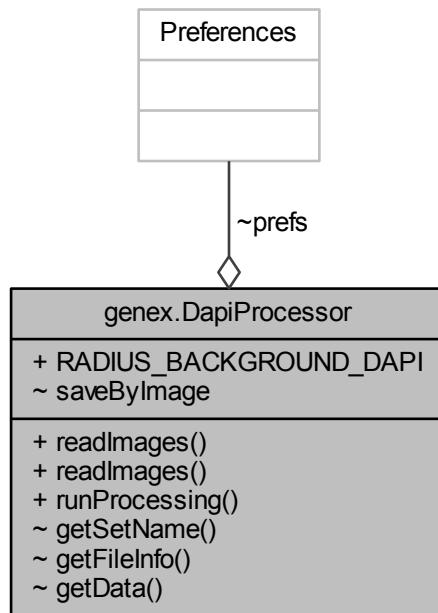

The documentation for this class was generated from the following file:

6.11.1 Detailed Description

Author

schier

6.11.2 Member Function Documentation

6.11.2.1 **FISHdata** genex.DapiProcessor.getData () [package]

6.11.2.2 **FileInfo** genex.DapiProcessor.getFileInfo () [package]

Returns

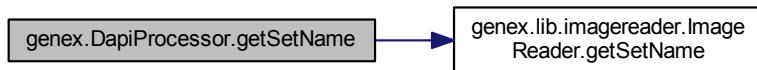

file information about the input set

6.11.2.3 **String** genex.DapiProcessor.getSetName () [package]

Returns

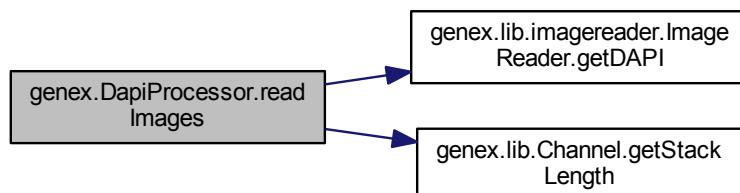

name of the input set

Here is the call graph for this function:

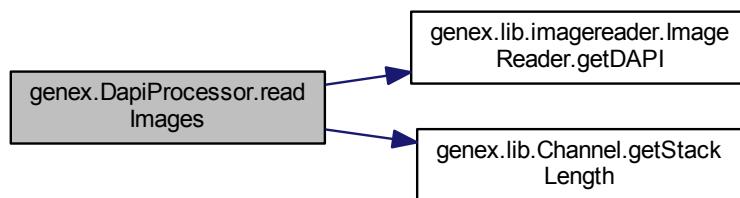

6.11.2.4 **int** genex.DapiProcessor.readImages ()

Here is the call graph for this function:

6.11.2.5 int genex.DapiProcessor.readImages (String *fname*)

Here is the call graph for this function:

6.11.2.6 Dapi genex.DapiProcessor.runProcessing (final int *measures*, final boolean *saveResults*, final boolean *exportRoi*)

process the DAPI channel - includes background subtraction, intensity normalization, segmentation, particle measurement and filtering

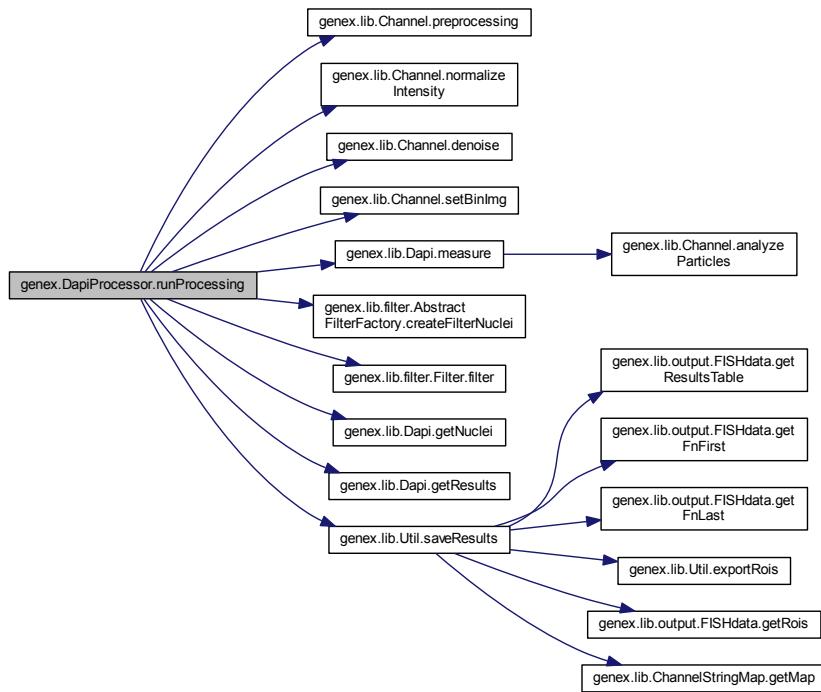

Parameters

<code>measures</code>	particle parameters to be measured
<code>saveResults</code>	boolean: save results to file
<code>exportRoi</code>	boolean: save Rois to file

Returns

Dapi object

Here is the call graph for this function:

6.11.3 Member Data Documentation

6.11.3.1 final Preferences genex.DapiProcessor.prefs = Preferences.userRoot().node(ParamDefines.PREFS_ROOT)
 [package]

6.11.3.2 final int genex.DapiProcessor.RADIUS_BACKGROUND_DAPI = 50

Filter radius - DAPI background subtraction

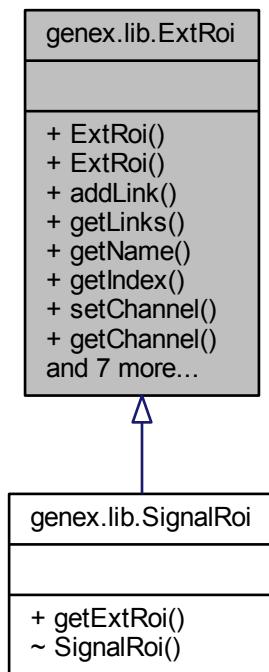

6.11.3.3 boolean genex.DapiProcessor.saveByImage = prefs.getBoolean(ParamDefines.PROCESS_BY_IMAGE, true)
 [package]

The documentation for this class was generated from the following file:

- `void setRoi (Roi roi)`
- `Roi getRoi ()`
- `String getFname ()`
- `void setValidity (boolean valid)`
- `boolean getValidity ()`
- `void disable ()`
- `void enable ()`

6.12.1 Detailed Description

Extended ROI, contains the Roi as defined by ImageJ (<http://imagej.nih.gov/ij/developer/api/ij/gui/Roi.html>) with added validity flag, channel name and link to parent (DAPI) or child (signal) object

Author

J. Schier

6.12.2 Constructor & Destructor Documentation

6.12.2.1 genex.lib.ExtRoi.ExtRoi (Roi *roi*, String *fname*, ChannelNames *chanName*, int *idx*)

Extended Roi constructor. Roi validity set to true.

Parameters

<i>roi</i>	ImageJ ROI (http://imagej.nih.gov/ij/developer/api/ij/gui/Roi.html)
<i>fname</i>	file name - image that contains this roi
<i>chanName</i>	channel identifier
<i>idx</i>	Index of this Roi. Must be unique in the given channel.

6.12.2.2 genex.lib.ExtRoi.ExtRoi (Roi *roi*, String *fname*, boolean *valid*, ChannelNames *chanName*, int *idx*)

Extended Roi constructor. Roi validity set to true.

Parameters

<i>roi</i>	ImageJ ROI (http://imagej.nih.gov/ij/developer/api/ij/gui/Roi.html)
<i>fname</i>	file name - image that contains this roi
<i>valid</i>	validity of this Roi
<i>chanName</i>	channel identifier
<i>idx</i>	Index of this Roi. Must be unique in the given channel.

6.12.3 Member Function Documentation

6.12.3.1 void genex.lib.ExtRoi.addLink (ExtRoi *roi*)

Add link to Roi in parameter Typically used to add link to a signal to the DAPI nucleus

Parameters

<i>roi</i>	Roi to be linked
------------	------------------

6.12.3.2 void genex.lib.ExtRoi.disable()

Disable (set validity to false) this Roi and (if the Roi is in DAPI) the associated signals

6.12.3.3 void genex.lib.ExtRoi.enable()

Enable (set validity to true) this Roi

6.12.3.4 ChannelNames genex.lib.ExtRoi.getChannel()**Returns**

channel identifier (see linkGenExDefines.ChannelNames)

6.12.3.5 String genex.lib.ExtRoi.getFname()**Returns**

the name of the file that contains this roi

6.12.3.6 int genex.lib.ExtRoi.getIndex()**Returns**

index of this Roi

6.12.3.7 ArrayList<ExtRoi> genex.lib.ExtRoi.getLinks()

Get the Rois linked to this Roi Typically used to get all signals associated with a nucleus

Returns

List of extended Rois

6.12.3.8 String genex.lib.ExtRoi.getName()**Returns**

name of the associated ImageJ Roi

6.12.3.9 Roi genex.lib.ExtRoi.getRoi()**Returns**

ImageJ Roi boundary associated with this Extended Roi

6.12.3.10 boolean genex.lib.ExtRoi.getValidity()**Returns**

validity of this Roi

6.12.3.11 void genex.lib.ExtRoi.setChannel(ChannelNames channel)

Set the channel identifier (see linkGenExDefines.ChannelNames)@paramchannel

6.12.3.12 void genex.lib.ExtRoi.setRoi(Roi roi)

Set the ImageJ Roi boundary associated with this Extended Roi

Parameters

<i>roi</i>	
------------	--

6.12.3.13 void genex.lib.ExtRoi.setValidity(boolean valid)

Set validity of this Roi

Parameters

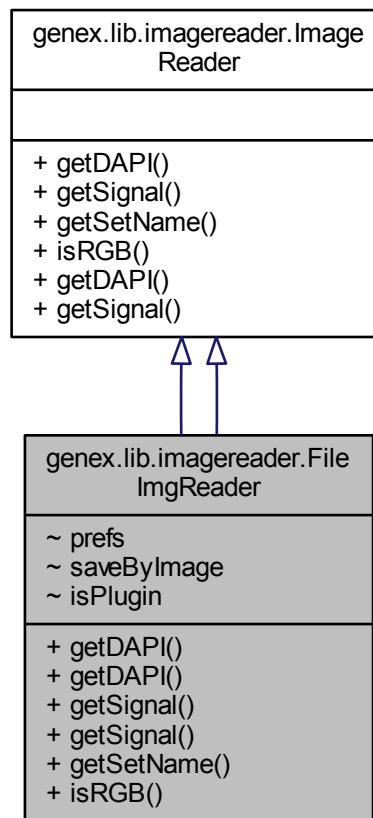

<i>valid</i>	
--------------	--

The documentation for this class was generated from the following file:

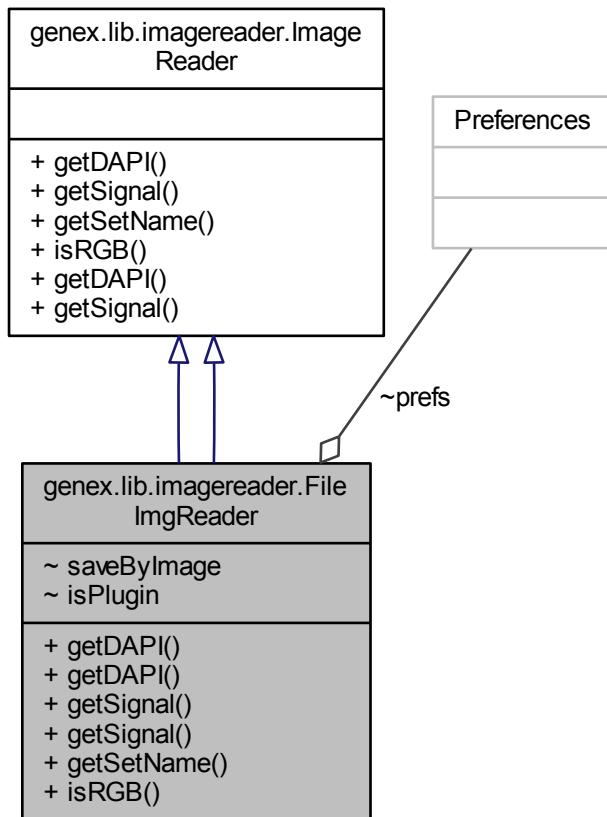

-
- src/genex/lib/[ExtRoi.java](#)

6.13 genex.lib.imagereader.FileImgReader Class Reference

Inheritance diagram for genex.lib.imagereader.FileImgReader:

Collaboration diagram for genex.lib.imagereader.FileImgReader:

Public Member Functions

- `Dapi getDAPI ()`
- `Dapi getDAPI (String filename)`
- `SigChannel getSignal (ChannelNames channel)`
- `SigChannel getSignal (String filename, ChannelNames channel)`
- `String getSetName ()`
- `boolean isRGB ()`

Package Attributes

- `final Preferences prefs = Preferences.userRoot().node(ParamDefines.PREFS_ROOT)`
- `boolean saveByImage = prefs.getBoolean(ParamDefines.PROCESS_BY_IMAGE, true)`
- `boolean isPlugin = prefs.getBoolean(ParamDefines.IS_PLUGIN, true)`

6.13.1 Detailed Description

Reads sequence of images from a disk directory to selected channel Images are identified by parameters stored in `ChannelInfo` object (directory, filename pattern, used/unused channel) These parameters are set using the `GenExParams_` plugin and saved using `java.util.prefs.Preferences`

Author

Bohumil Kovar, Jan Schier

6.13.2 Member Function Documentation

6.13.2.1 Dapi genex.lib.imagereader.FileImgReader.getDAPI ()

Get the DAPI channel

Returns

object containing the DAPI image

Implements [genex.lib.imagereader.ImageReader](#).

6.13.2.2 Dapi genex.lib.imagereader.FileImgReader.getDAPI (String *filename*)

Get the DAPI channel Returns null if the filename is not found

Parameters

<i>filename</i>	name of image to read
-----------------	-----------------------

Returns

object containing the DAPI image

Implements [genex.lib.imagereader.ImageReader](#).

6.13.2.3 String genex.lib.imagereader.FileImgReader.getSetName ()

Get the name of the image set

Returns

set name

Implements [genex.lib.imagereader.ImageReader](#).

6.13.2.4 SigChannel genex.lib.imagereader.FileImgReader.getSignal (ChannelNames *channel*)

Get single signal channel

Parameters

<i>channel</i>	string, denoting the channel: "RED", "GREEN"
----------------	--

Returns

signal channel

Implements [genex.lib.imagereader.ImageReader](#).

6.13.2.5 SigChannel genex.lib.imagereader.FileImgReader.getSignal (String *filename*, ChannelNames *channel*)

Get single signal channel Returns null if the filename is not found

Parameters

<i>filename</i>	name of image to read
<i>channel</i>	string, denoting the channel: "RED", "GREEN"

Returns

signal channel

Implements [genex.lib.imagereader.ImageReader](#).

6.13.2.6 boolean genex.lib.imagereader.FileImgReader.isRGB()**Returns**

true for RGB input images

Implements [genex.lib.imagereader.ImageReader](#).

6.13.3 Member Data Documentation

6.13.3.1 boolean genex.lib.imagereader.FileImgReader.isPlugin = prefs.getBoolean(ParamDefines.IS_PLUGIN, true)
[package]

6.23.1 Detailed Description

Author

J. Schier

6.23.2 Constructor & Destructor Documentation

6.23.2.1 genex.GenexPipeline.GenexPipeline (ChannelNames[] *channels*)

6.23.3 Member Function Documentation

6.23.3.1 Dapi genex.GenexPipeline.getDapi ()

6.23.3.2 String genex.GenexPipeline.getSetName ()

Here is the call graph for this function:

6.23.3.3 ArrayList<SigChannel> genex.GenexPipeline.getSignals ()

6.23.3.4 int genex.GenexPipeline.readImages ()

Reads one or more dapi images (depends on processByImage setting) into [DapiProcessor](#)

Returns

length of image stack: >0 there are images to process ==0 all images processed -1 reading error

Here is the call graph for this function:

6.23.3.5 int genex.GenexPipeline.readImages (String *fname*)

Reads image *fname* into [DapiProcessor](#) processing may continue on subsequent images using [readImages\(\)](#)

Returns

length of image stack: >0 there are images to process ==0 all images processed -1 reading error

Here is the call graph for this function:

**6.23.3.6 Results `genex.GenexPipeline.runPipeline(int objectMeasures)`**

Run image processing pipeline: read all images from input source and process them

Parameters

<code>objectMeasures</code>	object parameters to measure
-----------------------------	------------------------------

Returns

Results packed Results table and extRois

Here is the call graph for this function:

**6.23.3.7 Results `genex.GenexPipeline.runPipeline(ArrayList< String > fname, int objectMeasures)`**

Run image processing pipeline: read images denoted by fname array and process them (version for individual channel images). Processing may continue on subsequent images if `runPipeline(int objectMeasures)` is used in subsequent calls. fname is an array of Strings, one per channel to read

Parameters

<code>objectMeasures</code>	object parameters to measure
-----------------------------	------------------------------

Returns

Results packed Results table and extRois

Here is the call graph for this function:

**6.23.3.8 Results genex.GenexPipeline.runPipeline (String fname, int objectMeasures)**

Run image processing pipeline: read image denoted by fname from input source and process it (version for RGB images). Processing may continue on subsequent images if [runPipeline\(int objectMeasures\)](#) is used in subsequent calls. fname is single String, common for both R and G channel. Which channel to read depends on setting of channels array (initialized in Constructor)

Parameters

<i>objectMeasures</i>	object parameters to measure
-----------------------	------------------------------

Returns

Results packed Results table and extRois

Here is the call graph for this function:

6.25.1 Detailed Description

Helper utilities for display of detected objects

Author

J. Schier

6.25.2 Constructor & Destructor Documentation

6.25.2.1 genex.lib.GraphicsUtils.GraphicsUtils ([ArrayList< ChannelNames >](#) chanNames, [ArrayList< Color >](#) colors) [protected]

Constructor - defines channel - color mapping using list of channel identifiers and list of colors

Parameters

<i>chanNames</i>	channel identifiers
------------------	---------------------

<i>colors</i>	corresponding channel colors
---------------	------------------------------

6.25.2.2 genex.lib.GraphicsUtils.GraphicsUtils ()

Constructor - defines default channel mapping

6.25.3 Member Function Documentation

6.25.3.1 void genex.lib.GraphicsUtils.addRoiOverlay (ArrayList< ExtRoi > rois, Overlay overlay) [protected]

Adds extRoi detected in the given channel to overlay using the corresponding color

Parameters

<i>rois</i>	list of extended ROIs
<i>overlay</i>	image overlay

6.25.3.2 ImagePlus genex.lib.GraphicsUtils.composeImage (final Dapi dapi, final ChannelNames[] channels, ArrayList< SigChannel > signals, String setName)

Compose RGB image out of DAPI channel and signals

Parameters

<i>dapi</i>	dapi channel
<i>channels</i>	channel names (see GenExDefines.ChannelNames)
<i>signals</i>	list of signal channels
<i>setName</i>	name of the input image

Returns

6.25.3.3 void genex.lib.GraphicsUtils.setRoiDisplay (ExtRoi roi) [protected]

Call methods to set the display parameters for valid/invalid objects

Parameters

<i>roi</i>	object to display
------------	-------------------

Here is the call graph for this function:

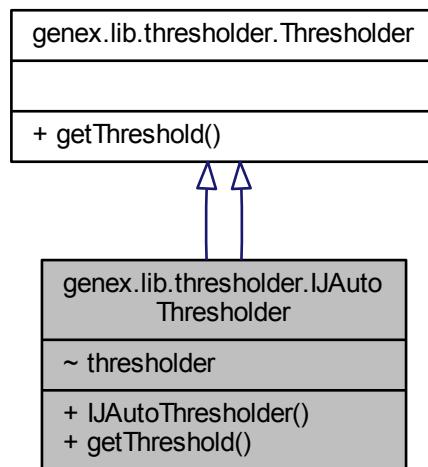

The documentation for this class was generated from the following file:

6.28.1 Detailed Description

Methods to access and store image directory information

Author

J. Schier

6.28.2 Member Function Documentation

6.28.2.1 String [genex.lib.params.ImageDirInfo.getCSVDir \(\)](#)

Get the directory for the CSV result files from Preferences. If not set, use the image directory of the user home directory.

Returns

Image directory

6.28.2.2 String [genex.lib.params.ImageDirInfo.getDir \(\)](#)

Get last used directory from Preferences. If not set, use the user home directory.

Returns

Image directory

6.28.2.3 File [] [genex.lib.params.ImageDirInfo.getDirList \(String pattern, String dir \)](#)

Get directory listing conforming given pattern. Only image files with extensions .tif, .tiff, .bmp, .png and .jpg are listed, case insensitive.

Parameters

<i>pattern</i>	get filenames containing this pattern. No regex characters (targeted to users who have never heard of regex).
----------------	---

<i>dir</i>	location of image directory
------------	-----------------------------

Returns

array of File objects.

6.28.2.4 void genex.lib.params.ImageDirInfo.setCSVDir (String *dir*) [protected]

Store CSV directory dir to preferences. Only performed if dir is non-null

Parameters

<i>dir</i>

6.28.2.5 void genex.lib.params.ImageDirInfo.setDir (String *dir*) [protected]

Store directory dir to preferences. Only performed if dir is non-null

Parameters

<i>dir</i>

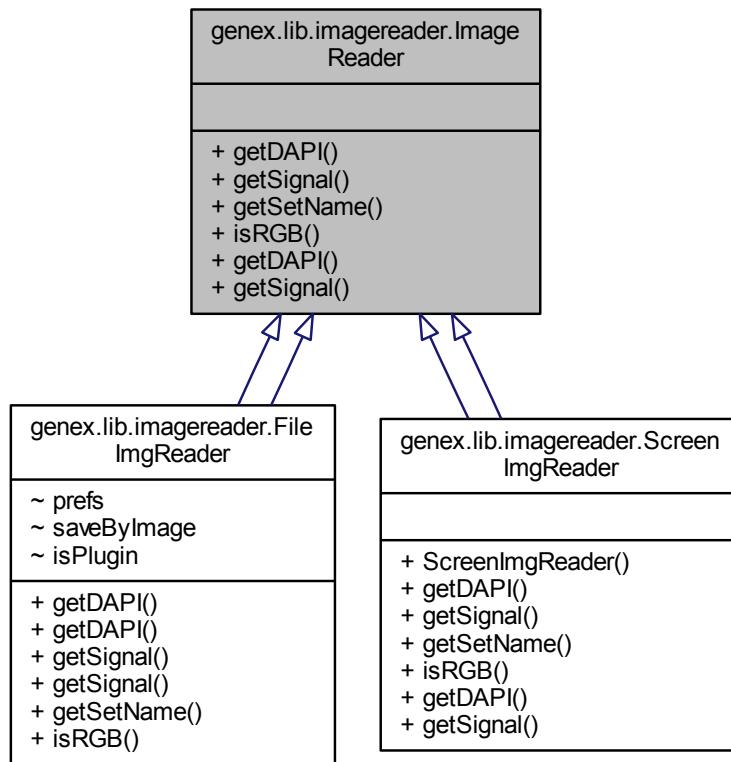

6.28.3 Member Data Documentation**6.28.3.1 Preferences genex.lib.params.ImageDirInfo.prefs = Preferences.userRoot().node(ParamDefines.PREFS_ROOT) [package]**

6.29 genex.lib.imagereader.ImageReader Interface Reference

Inheritance diagram for genex.lib.imagereader.ImageReader:

Collaboration diagram for genex.lib.imagereader.ImageReader:

Public Member Functions

- abstract `Dapi getDAPI ()`
- abstract `SigChannel getSignal (ChannelNames channel)`
- abstract `String getSetName ()`
- abstract `boolean isRGB ()`
- abstract `Dapi getDAPI (String filename)`
- abstract `SigChannel getSignal (String filename, ChannelNames channel)`

6.29.1 Detailed Description

Interface for image reader implementations

Author

J. Schier

6.29.2 Member Function Documentation

6.29.2.1 abstract Dapi genex.lib.imagereader.ImageReader.getDAPI () [abstract]

Get the DAPI channel

Returns

object containing the DAPI image

Implemented in [genex.lib.imagereader.FileImgReader](#), and [genex.lib.imagereader.ScreenImgReader](#).

6.29.2.2 abstract Dapi genex.lib.imagereader.ImageReader.getDAPI (String *filename*) [abstract]

Get the DAPI channel Returns null if the filename is not found

Parameters

<i>filename</i>	name of image to read
-----------------	-----------------------

Returns

object containing the DAPI image

Implemented in [genex.lib.imagereader.FileImgReader](#), and [genex.lib.imagereader.ScreenImgReader](#).

6.29.2.3 abstract String genex.lib.imagereader.ImageReader.getSetName () [abstract]

Get the name of the image set

Returns

set name

Implemented in [genex.lib.imagereader.FileImgReader](#), and [genex.lib.imagereader.ScreenImgReader](#).

6.29.2.4 abstract SigChannel genex.lib.imagereader.ImageReader.getSignal (ChannelNames *channel*) [abstract]

Get single signal channel

Parameters

<i>channel</i>	string, denoting the channel: "RED", "GREEN"
----------------	--

Returns

signal channel

Implemented in [genex.lib.imagereader.FileImgReader](#), and [genex.lib.imagereader.ScreenImgReader](#).**6.29.2.5 abstract SigChannel genex.lib.imagereader.ImageReader.getSignal (String *filename*, ChannelNames *channel*) [abstract]**

Get single signal channel Returns null if the filename is not found

Parameters

<i>filename</i>	name of image to read
<i>channel</i>	string, denoting the channel: "RED", "GREEN"

Returns

signal channel

Implemented in [genex.lib.imagereader.FileImgReader](#), and [genex.lib.imagereader.ScreenImgReader](#).**6.29.2.6 abstract boolean genex.lib.imagereader.ImageReader.isRGB () [abstract]****Returns**

true for RGB input images

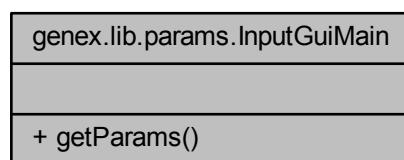

Implemented in [genex.lib.imagereader.FileImgReader](#), and [genex.lib.imagereader.ScreenImgReader](#).

The documentation for this interface was generated from the following file:

- src/genex/lib/imagereader/ImageReader.java

6.30 genex.lib.params.InputGuiMain Class Reference

Collaboration diagram for genex.lib.params.InputGuiMain:

Public Member Functions

- void [getParams \(\)](#)

6.30.1 Detailed Description

Helper class used to set up dialog for input parameters (location of image directory, which channels are used, file pattern for each channel). Parameters are initialized from [ChannelInfo](#) object.

Author

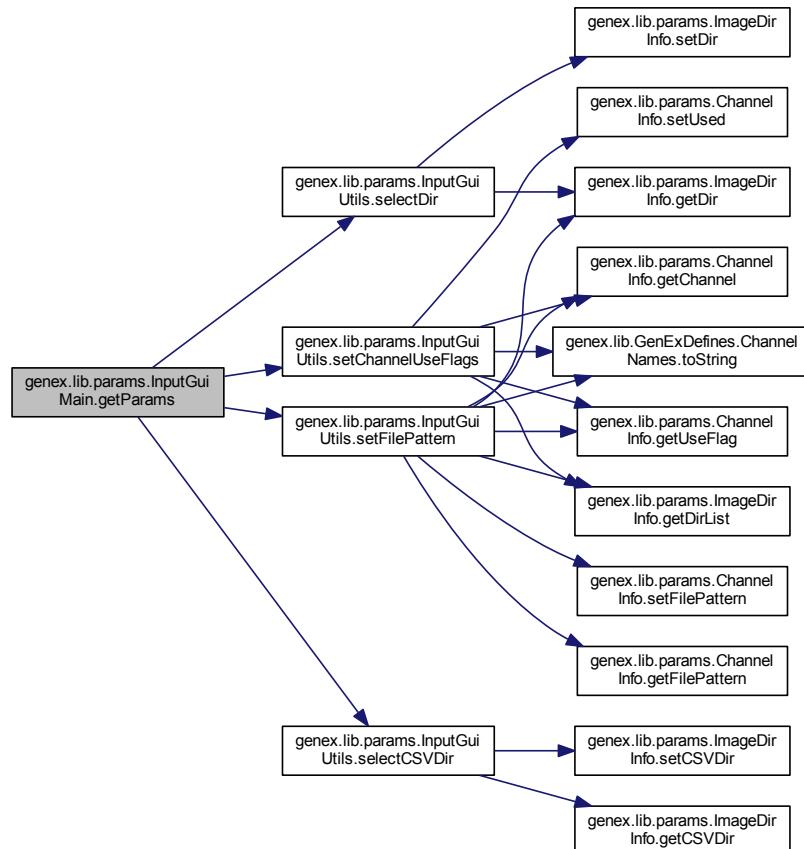

J. Schier

6.30.2 Member Function Documentation

6.30.2.1 void [genex.lib.params.InputGuiMain.getParams \(\)](#)

Helper method used to create the [ChannelInfo](#) objects for DAPI and signals and to call input dialog methods.

Here is the call graph for this function:

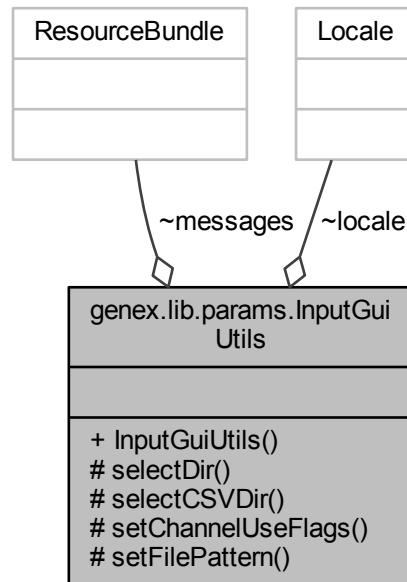

The documentation for this class was generated from the following file:

- src/genex/lib/params/[InputGuiMain.java](#)

- ResourceBundle [messages](#)

6.31.1 Detailed Description

GUI for file directory selection

Author

J. Schier

6.31.2 Constructor & Destructor Documentation

6.31.2.1 `genex.lib.params.InputGuiUtils.InputGuiUtils()`

6.31.3 Member Function Documentation

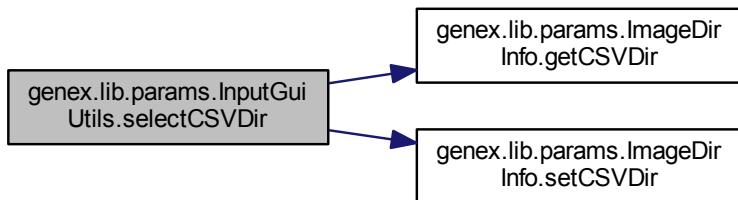

6.31.3.1 `String genex.lib.params.InputGuiUtils.selectCSVDir() [protected]`

Select the directory for storing csv files with results. Defaults to the image directory, if selected, or the home directory if the image directory was not selected yet, or null if cancelled

Returns

result directory path

Here is the call graph for this function:

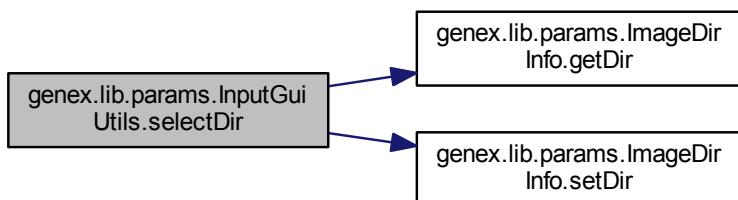

6.31.3.2 `String genex.lib.params.InputGuiUtils.selectDir() [protected]`

Select the image directory. Returns the image directory, or the home directory if the image directory was not selected yet, or null if cancelled

Returns

image directory path

Here is the call graph for this function:

6.31.3.3 Boolean genex.lib.params.InputGuiUtils.setChannelUseFlags (ArrayList< ChannelInfo > *channelInfo*, String *dir*)
[protected]

Set channel use flags in the [ChannelInfo](#) records

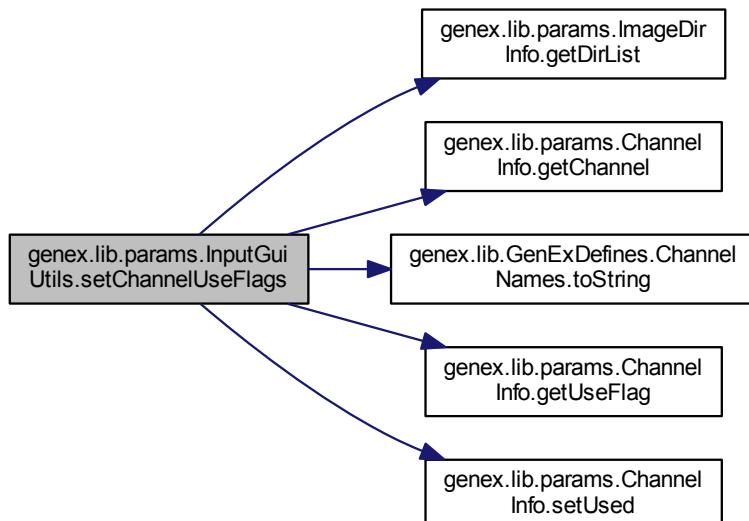

Parameters

<i>channelInfo</i>	List of Channel information records (see genex.lib.params.ChannelInfo)
<i>dir</i>	image directory

Returns

return true on successful setting of use flags, false if cancelled.

Here is the call graph for this function:

6.31.3.4 void genex.lib.params.InputGuiUtils.setFilePattern (ArrayList< ChannelInfo > channelInfo) [protected]

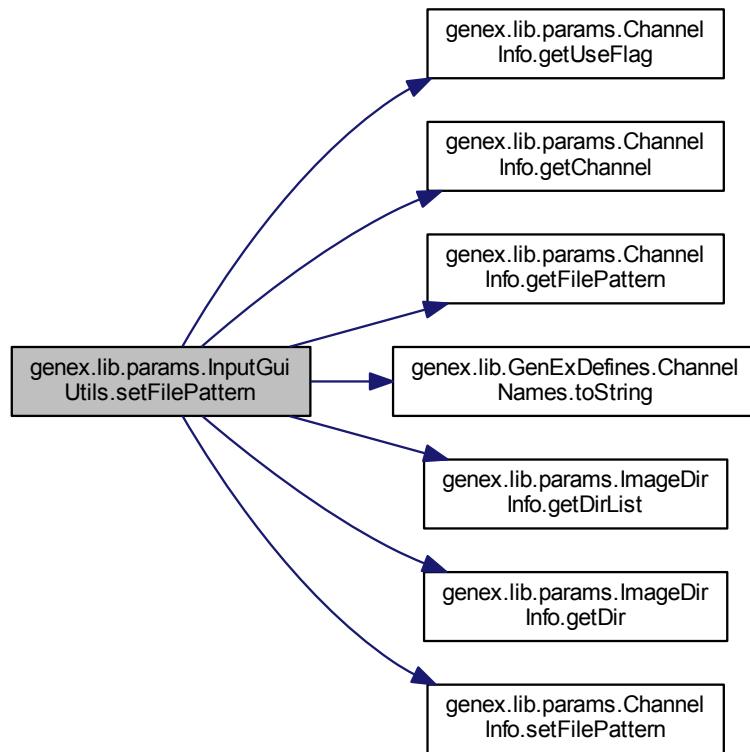

Enter the file pattern common for images in one channel. Checks for illegal characters in input (does not allow regexp characters for simplicity). If an illegal input detected, an error messages is displayed and the dialog GUI is presented again.

Information is stored to the [ChannelInfo](#) object and to java Preferences registers.

Parameters

<i>channelInfo</i>	Array of ChannelInfo objects
--------------------	--

Here is the call graph for this function:

6.31.4 Member Data Documentation

6.31.4.1 Locale `genex.lib.params.InputGuiUtils.locale` [package]

6.32 genex.lib.ObjectFilter Class Reference

Collaboration diagram for genex.lib.ObjectFilter:

Public Member Functions

- `ObjectFilter (int minArea, int maxArea, double minCirc, double maxCirc)`
- boolean `filter (Roi roi, ResultsTable results)`
- void `filter (ExtRoi extRoi, ResultsTable results)`
- boolean[] `filter (Roi[] roi, ResultsTable results)`
- void `filter (ArrayList< ExtRoi > rois, ResultsTable results)`

6.32.1 Detailed Description

Computation of signal statistical parameters, general object filtering

Author

J. Schier, B. Kovář

6.32.2 Constructor & Destructor Documentation

6.32.2.1 genex.lib.ObjectFilter.ObjectFilter (int *minArea*, int *maxArea*, double *minCirc*, double *maxCirc*)

6.32.3 Member Function Documentation

6.32.3.1 boolean genex.lib.ObjectFilter.filter (Roi *roi*, ResultsTable *results*)

Filter roi by area and circularity, as set by class constructor. The result is stored into the results table, column "Valid", in the row with label corresponding with the roi name and passed as the return value. ImageJ Roi class is used.

Parameters

<i>roi</i>	input roi (see http://imagej.nih.gov/ij/developer/api/ij/gui/Roi.html)
------------	--

<i>results</i>	results table
----------------	---------------

Returns

valid/invalid roi

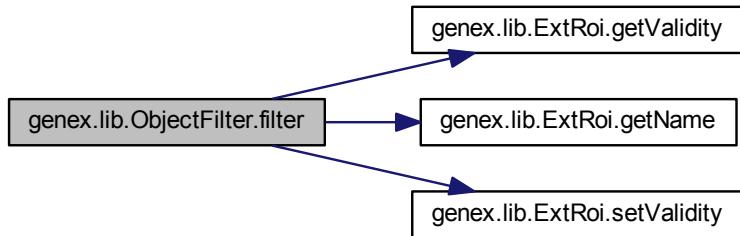

6.32.3.2 void genex.lib.ObjectFilter.filter (ExtRoi extRoi, ResultsTable results)

Filter [ExtRoi](#) by area and circularity, as set by class constructor. The result (boolean valid{invalid}) is stored into the corresponding [ExtRoi](#) parameter and to the the results table, column "Valid", in the row with label corresponding with the roi name. [ExtRoi](#) class is used.

Parameters

<i>extRoi</i>	input roi (see (ExtRoi)
<i>results</i>	results table

Here is the call graph for this function:

**6.32.3.3 boolean [] genex.lib.ObjectFilter.filter (Roi[] roi, ResultsTable results)**

Filter an array of roi by area and circularity, as set by class constructor. The result is stored into the results table, column "Valid" and passed in the return array. ImageJ Roi class is used.

Parameters

<i>roi</i>	input roi (see http://imagej.nih.gov/ij/developer/api/ij/gui/Roi.html)
<i>results</i>	results table

Returns

valid/invalid roi

6.32.3.4 void genex.lib.ObjectFilter.filter (ArrayList< ExtRoi > rois, ResultsTable results)

Filter list of [ExtRoi](#) by area and circularity, as set by class constructor. The result (boolean valid{invalid}) is, for each particle, stored into the corresponding [ExtRoi](#) parameter and to the the results table, column "Valid", in the row with label corresponding with the roi name. [ExtRoi](#) class is used.

Parameters

<code>results</code>	results table
<code>extRoi</code>	input roi (see (ExtRoi)

Here is the call graph for this function:

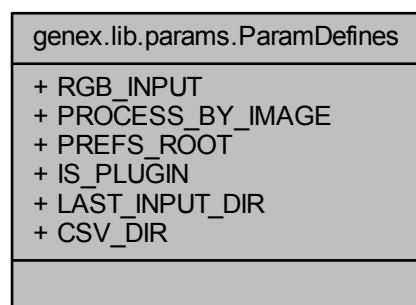

The documentation for this class was generated from the following file:

6.35 genex.lib.imagereader.RGButils Class Reference

Collaboration diagram for genex.lib.imagereader.RGButils:

Public Member Functions

- `ImagePlus getRGBChannel (ImageStack[] stack, String channelName)`
- `ImagePlus getRGBChannel (ImageStack[] stack, GenExDefines.ChannelNames channel)`
- `ImagePlus getRGBChannel (ImagePlus[] input, GenExDefines.ChannelNames channel)`

6.35.1 Detailed Description

Utility class for RGB image decomposition

Author

J. Schier, B. Kovář

6.35.2 Member Function Documentation

6.35.2.1 ImagePlus genex.lib.imagereader.RGButils.getRGBChannel (ImageStack[] stack, String channelName)

Implements selection of single channel from the RGB input stack.

Parameters

<i>stack</i>	input stack of RGB images
<i>channelName</i>	channel selector ("RED"/"GREEN"/"DAPI"/"BLUE")

Returns

selected channel (ImagePlus) or null if the selector is not valid

6.35.2.2 ImagePlus genex.lib.imagereader.RGButils.getRGBChannel (ImageStack[] stack, GenExDefines.ChannelNames channel)

Implements selection of single channel from the RGB input stack.

Parameters

<i>stack</i>	input array of R, G and B stacks
<i>channel</i>	channel selector RED/GREEN/DAPI) (see genex.lib.GenExDefines.ChannelNames)

Returns

selected channel (ImagePlus) or null if the selector is not valid

6.35.2.3 ImagePlus genex.lib.imagereader.RGButils.getRGBChannel (ImagePlus[] input, GenExDefines.ChannelNames channel)

Implements selection of single channel from the RGB input stack.

Parameters

<i>input</i>	input array of R, G and B images
<i>channel</i>	channel selector (RED/GREEN/DAPI) (see genex.lib.GenExDefines.ChannelNames)

Returns

selected channel (ImagePlus) or null if the selector is not valid

- `RoiLimits sigSlice2ROIs`

6.36.1 Detailed Description

This class implements simple interactive editor for labeling the objects (nuclei and signals), detected by the plugin. It is used to correct the valid/invalid setting for the objects, to collect the expert input for evaluation of the system.

Author

J. Schier, B. Kovář

6.36.2 Constructor & Destructor Documentation

6.36.2.1 genex.lib.RoiLabeler.RoiLabeler (`ImagePlus img, FISHdata dapiData, FISHdata sigData, HashMap< ChannelNames, String > channelStr`)

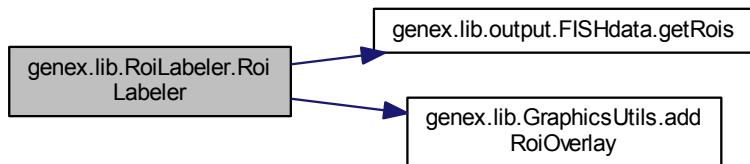

Class constructor for the roi editor

Parameters

<code>img</code>	input RGB image
<code>dapiData</code>	data of the DAPI channel, see FISHdata
<code>sigData</code>	data of the signal channels, see FISHdata

<i>channelStr</i>	hash table for conversion between channel identification tags and the corresponding string descriptions (ChannelStringMap)
-------------------	--

Here is the call graph for this function:

6.36.3 Member Function Documentation

6.36.3.1 `void genex.lib.RoiLabeler.mouseClicked (MouseEvent e)`

Event listener, implements behavior on mouse click in the image editor

6.36.3.2 `void genex.lib.RoiLabeler.mouseEntered (MouseEvent e)`

6.36.3.3 `void genex.lib.RoiLabeler.mouseExited (MouseEvent e)`

6.36.3.4 `void genex.lib.RoiLabeler.mousePressed (MouseEvent e)`

6.36.3.5 `void genex.lib.RoiLabeler.mouseReleased (MouseEvent e)`

6.37.1 Detailed Description

Methods for reading the input image from the screen.

Author

J. Schier

6.37.2 Constructor & Destructor Documentation

6.37.2.1 genex.lib.imagereader.ScreenImgReader.ScreenImgReader()

Creates a reader instance.

6.37.3 Member Function Documentation

6.37.3.1 Dapi genex.lib.imagereader.ScreenImgReader.getDAPI()

Get the DAPI channel

Returns

object containing the DAPI image

Implements [genex.lib.imagereader.ImageReader](#).

6.37.3.2 Dapi genex.lib.imagereader.ScreenImgReader.getDAPI(String filename)

Get the DAPI channel Returns null if the filename is not found

Parameters

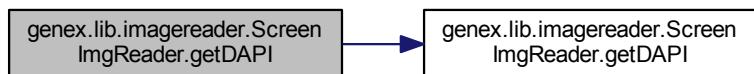

<i>filename</i>	name of image to read
-----------------	-----------------------

Returns

object containing the DAPI image

Implements [genex.lib.imagereader.ImageReader](#).

Here is the call graph for this function:

6.37.3.3 String genex.lib.imagereader.ScreenImgReader.getSetName()

Get the name of the image set

Returns

set name

Implements [genex.lib.imagereader.ImageReader](#).

6.37.3.4 SigChannel genex.lib.imagereader.ScreenImgReader.getSignal(ChannelNames channel)

Get single signal channel

Parameters

<i>channel</i>	string, denoting the channel: "RED", "GREEN"
----------------	--

Returns

signal channel

Implements [genex.lib.imagereader.ImageReader](#).

6.37.3.5 SigChannel genex.lib.imagereader.ScreenImgReader.getSignal (String *filename*, ChannelNames *channel*)

Get single signal channel Returns null if the filename is not found

Parameters

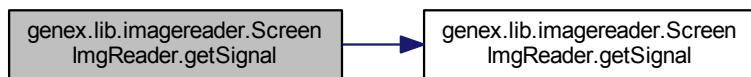

<i>filename</i>	name of image to read
<i>channel</i>	string, denoting the channel: "RED", "GREEN"

Returns

signal channel

Implements [genex.lib.imagereader.ImageReader](#).

Here is the call graph for this function:

**6.37.3.6 boolean genex.lib.imagereader.ScreenImgReader.isRGB ()****Returns**

true for RGB input images

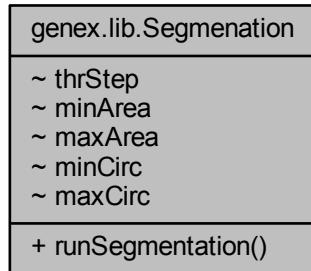

Implements [genex.lib.imagereader.ImageReader](#).

The documentation for this class was generated from the following file:

- src/genex/lib/imagereader/ScreenImgReader.java

6.38 genex.lib.Segmenation Class Reference

Collaboration diagram for genex.lib.Segmenation:

Public Member Functions

- ImagePlus [runSegmentation](#) (ImagePlus img, boolean watershed)

Package Attributes

- final int [thrStep](#) = 3
- final int [minArea](#) = 500
- final int [maxArea](#) = 90000
- final double [minCirc](#) = .7
- final double [maxCirc](#) = 1.0

6.38.1 Detailed Description

Author

J. Schier

6.38.2 Member Function Documentation

6.38.2.1 ImagePlus genex.lib.Segmenation.runSegmentation (ImagePlus *img*, boolean *watershed*)

Perform segmentation of an image, optionally perform watershed segmentation on the result

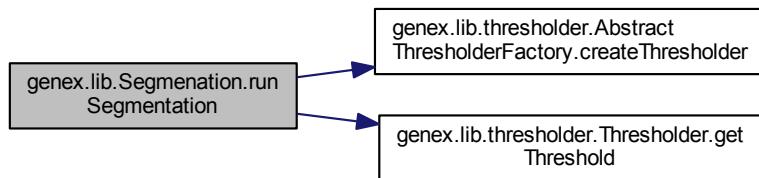

Parameters

<i>img</i>	input image
<i>watershed</i>	perform watershed segmentation

Returns

resulting binary image

Here is the call graph for this function:

6.38.3 Member Data Documentation

6.38.3.1 `final int genex.lib.Segmenation.maxArea = 90000` [package]

6.38.3.2 `final double genex.lib.Segmenation.maxCirc = 1.0` [package]

6.38.3.3 `final int genex.lib.Segmenation.minArea = 500` [package]

6.38.3.4 `final double genex.lib.Segmenation.minCirc = .7` [package]

6.38.3.5 `final int genex.lib.Segmenation.thrStep = 3` [package]

6.39 genex.lib.SigChannel Class Reference

Channel-specific methods for hybridization signals, extends the [Channel](#) class.

Inheritance diagram for genex.lib.SigChannel:

Collaboration diagram for genex.lib.SigChannel:

Public Member Functions

- `SigChannel (ImageStack[] stack, String channel)`
- `SigChannel (ImageStack[] stack, ChannelNames channel)`
- `SigChannel (ImagePlus image, ChannelNames channel)`
- void `binarization ()`

Additional Inherited Members

6.39.1 Detailed Description

Channel-specific methods for hybridization signals, extends the [Channel](#) class.

Author

J. Schier, B. Kovář

6.39.2 Constructor & Destructor Documentation

6.39.2.1 genex.lib.SigChannel.SigChannel (`ImageStack[] stack, String channel`)

Selects channel from the input RGB stack.

Parameters

<code>stack</code>	input RGB stack
<code>channel</code>	"RED"/"GREEN"/"BLUE" String denoting color of the selected channel

6.39.2.2 genex.lib.SigChannel.SigChannel (`ImageStack[] stack, ChannelNames channel`)

Selects channel from the input RGB stack.

Parameters

<code>stack</code>	input RGB stack
<code>channel</code>	RED/GREEN/DAPI identifier of the selected channel GenExDefines.ChannelNames

6.39.2.3 genex.lib.SigChannel.SigChannel (`ImagePlus image, ChannelNames channel`)

Constructs signal channel from the input image stack.

Parameters

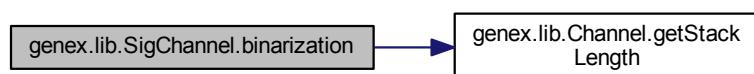

<code>stack</code>	input image stack
<code>channel</code>	RED/GREEN/DAPI identifier of the selected channel GenExDefines.ChannelNames

6.39.3 Member Function Documentation

6.39.3.1 void genex.lib.SigChannel.binarization ()

Binarization of hybridization signals. Uses threshold segmentation by Renyi Entropy method

Here is the call graph for this function:

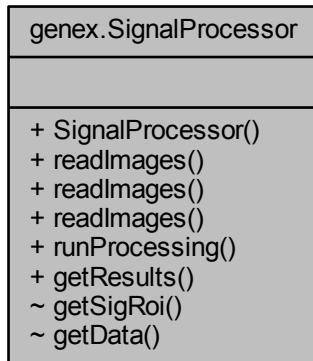

The documentation for this class was generated from the following file:

- src/genex/lib/[SigChannel.java](#)

6.40 genex.SignalProcessor Class Reference

Collaboration diagram for genex.SignalProcessor:

Public Member Functions

- [SignalProcessor \(ChannelNames\[\] channels\)](#)
- int [readlImages \(\)](#)
- int [readlImages \(ArrayList< String > fname\)](#)
- int [readlImages \(String fname\)](#)
- ArrayList< [SigChannel](#) > [runProcessing \(ChannelNames\[\] channels, ArrayList< ExtRoi > nuclei, int object←Measures, boolean saveResults, boolean exportRoi\)](#)
- ResultsTable [getResults \(\)](#)

Package Functions

- ArrayList< [ExtRoi](#) > [getSigRoi \(\)](#)
- [FISHdata getData \(\)](#)

6.40.1 Detailed Description

This class is used to define the processing flow for the signal channels (RED, GREEN), that is, to call the processing methods from the GenEx library.

Author

J. Schier, B. Kovář

6.40.2 Constructor & Destructor Documentation

6.40.2.1 genex.SignalProcessor.SignalProcessor (`ChannelNames[] channels`)

Constructor - initialize an array of imageReaders, one for each signal channel

Parameters

<i>channels</i>	
-----------------	--

6.40.3 Member Function Documentation**6.40.3.1 FISHdata genex.SignalProcessor.getData() [package]****6.40.3.2 ResultsTable genex.SignalProcessor.getResults()****Returns**

signals result table <http://imagej.nih.gov/ij/developer/api/ij/measure/ResultsTable.html>

6.40.3.3 ArrayList<ExtRoi> genex.SignalProcessor.getSigRoi() [package]**Returns**

signal extRois ExtRoi

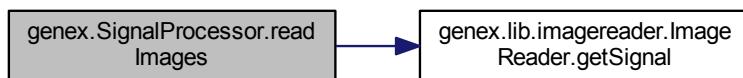

6.40.3.4 int genex.SignalProcessor.readImages()

Get input images for signals

Returns

error code: 0=OK, -1= error reading file

Here is the call graph for this function:

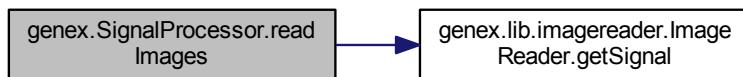

**6.40.3.5 int genex.SignalProcessor.readImages(ArrayList< String > fname)**

Get input images for signals from fname (version for one image per channel) fname should contain one String per each channel to read.

Returns

error code: 0=OK, -1=wrong fname or error reading file

Here is the call graph for this function:

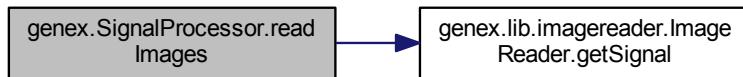

**6.40.3.6 int genex.SignalProcessor.readImages (String fname)**

Get input images for signals from fname (version for RGB images) fname contains common filename for both R and G channel.

Returns

error code: 0=OK, -1=wrong fname or error reading file

Here is the call graph for this function:

**6.40.3.7 ArrayList<SigChannel> genex.SignalProcessor.runProcessing (ChannelNames[] channels, ArrayList<
ExtRoi > nuclei, int objectMeasures, boolean saveResults, boolean exportRoi)**

This method defines the processing flow of the signal channels

Parameters

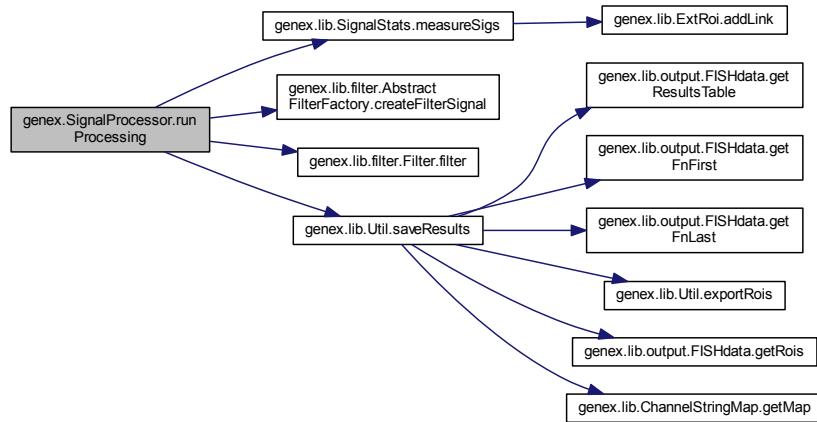

<i>channels</i>	Array of ChannelNames GenExDefines.ChannelNames identifiers, define the channels that are actually used (mainly for the case of RGB input, with only one of the R/G channels used)
<i>nuclei</i>	list of ExtRoi ExtRoi, defining the nuclei (objects) found in the DAPI channel
<i>objectMeasures</i>	object parameters to be measured http://imagej.nih.gov/ij/developer/api/ij/measure/Measurements.html
<i>saveResults</i>	boolean: save the results table http://imagej.nih.gov/ij/developer/api/ij/measure/ResultsTable.html to a file

<i>exportRoi</i>	boolean: export ROI http://imagej.nih.gov/ij/developer/api/ij/gui/PolygonRoi.html to a file
------------------	---

Returns

list of signal channels Channel

Here is the call graph for this function:

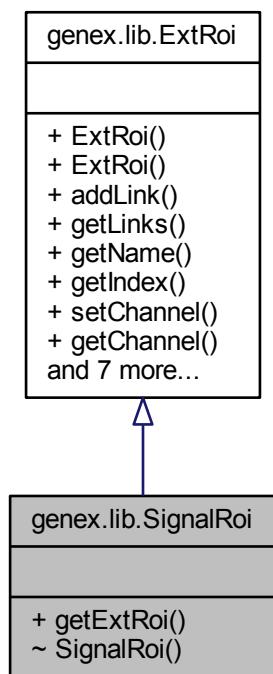

The documentation for this class was generated from the following file:

6.42.1 Member Function Documentation

6.42.1.1 ResultsTable genex.lib.SignalStats.measureSigs (ArrayList< SigChannel > images, ArrayList< ExtRoi > nuclei, ArrayList< ExtRoi > signals, int measures, int minSize, int maxSize)

Measure signals: the binary image of signals, as received from segmentation, is masked by DAPI nuclei (roi). For the signals contained in each nucleus, parameters, as defined by measures, are evaluated. For definition of parameters, see <http://imagej.nih.gov/ij/docs/guide/146-30.html#sub:Set-Measurements...> and <http://imagej.nih.gov/ij/developer/api/ij/measure/ResultsTable.html>. The resulting data is stored in the `sigResults` ResultsTable. Signals are filtered by `minSize` and `maxSize`.

Parameters

<code>images</code>	input images of signals, list of image stacks. Arbitrary number of channels may be passed, each with a stack of images.
<code>nuclei</code>	list of nuclei, stored in extended rois (<code>ExtRoi</code>)
<code>signals</code>	list of signal rois, stored in extended rois
<code>measures</code>	parameter definition
<code>minSize</code>	minimum particle size in pixels
<code>maxSize</code>	maximum particle size in pixels

Returns

result table

Here is the call graph for this function:

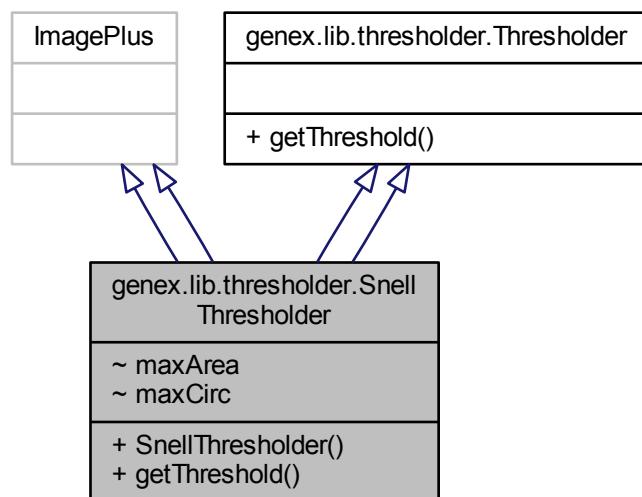

The documentation for this class was generated from the following file:

- src/genex/lib/SignalStats.java

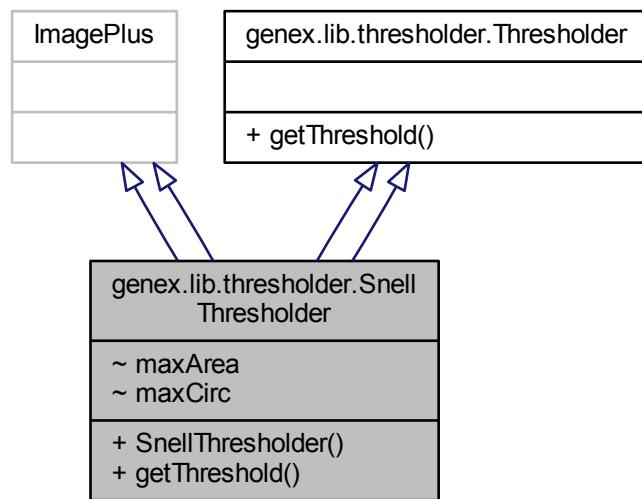

6.43 genex.lib.thresholder.SnellThreshold Class Reference

Implementation of Violet Snell segmentation.

Inheritance diagram for genex.lib.thresholder.SnellThreshold:

Collaboration diagram for genex.lib.thresholder.SnellThreshold:

Public Member Functions

- `SnellThreshold (int minArea, int maxArea, double minCirc, double maxCirc, int minThr, int thrStep, boolean stack)`
- `int[] getThreshold (ImagePlus img)`

Package Attributes

- final int `maxArea`
- final double `maxCirc`

6.43.1 Detailed Description

Implementation of Violet Snell segmentation.

Author

J. Schier

6.43.2 Constructor & Destructor Documentation

6.43.2.1 `genex.lib.thresholder.SnellThreshold.SnellThreshold (int minArea, int maxArea, double minCirc, double maxCirc, int minThr, int thrStep, boolean stack)`

Segmentation by the Violet Snell method.

Parameters

<i>minArea</i>	minimum area of detected objects
<i>maxArea</i>	maximum area of detected objects
<i>minCirc</i>	minimum circularity of detected objects
<i>maxCirc</i>	maximum circularity of detected objects
<i>minThr</i>	minimum allowed threshold to use (user input)
<i>thrStep</i>	threshold decrease step

See also

Snell et al: Segmentation and shape classification of nuclei, Centre for Vision, Signal Processing and Speech, University of Surrey

6.43.3 Member Function Documentation**6.43.3.1 int [] genex.lib.thresholder.SnellThreshold.getThreshold (ImagePlus *img*)**

Segmentation by the Violet Snell method. Run the computation.

Parameters

<i>img</i>	input stack of 8-bit grayscale images
------------	---------------------------------------

Implements [genex.lib.thresholder.Threshold](#).

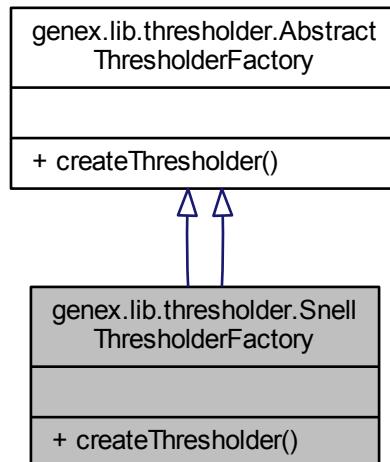

6.43.4 Member Data Documentation**6.43.4.1 final int genex.lib.thresholder.SnellThreshold.maxArea [package]****6.43.4.2 final double genex.lib.thresholder.SnellThreshold.maxCirc [package]**

6.46.1 Detailed Description

Helper methods for saving object parameters and ROIs to disk files

Author

J. Schier, B. Kovář

6.46.2 Member Function Documentation

6.46.2.1 void genex.lib.Util.exportRoi (ExtRoi extRoi, String channel, BufferedWriter writer)

Export rois to a text file. Takes extended rois and extracts the coordinates of the polygon rois <http://imagej.nih.gov/ij/developer/api/ij/gui/PolygonRoi.html>

Each record in the text file consists of the roi name, roi id number, channel name (String), number of vertices, and their x and y coordinates in format x1, y1, x2, y2, ..

Parameters

<i>extRoi</i>	input extended rois ExtRoi
<i>channel</i>	channel identification string
<i>writer</i>	file writer

Here is the call graph for this function:

6.46.2.2 void genex.lib.Util.exportRois (ArrayList< ExtRoi > rois, HashMap< ChannelNames, String > channelMap, String filename)

Export rois to a text file. Takes extended rois and extracts the coordinates of the polygon rois <http://imagej.nih.gov/ij/developer/api/ij/gui/PolygonRoi.html>

Each record in the text file consists of the roi name, roi id number, channel name, number of vertices, and their x and y coordinates in format x1, y1, x2, y2, .. The channel name in the string form is obtained from the channelMap parameter using the channel ID stored in extended roi

Parameters

<i>rois</i>	list of rois (linkExtRoi)@paramchannelMapmappingbetweenchannelidsandstrings@paramfilenameoutputfiletou
-------------	--

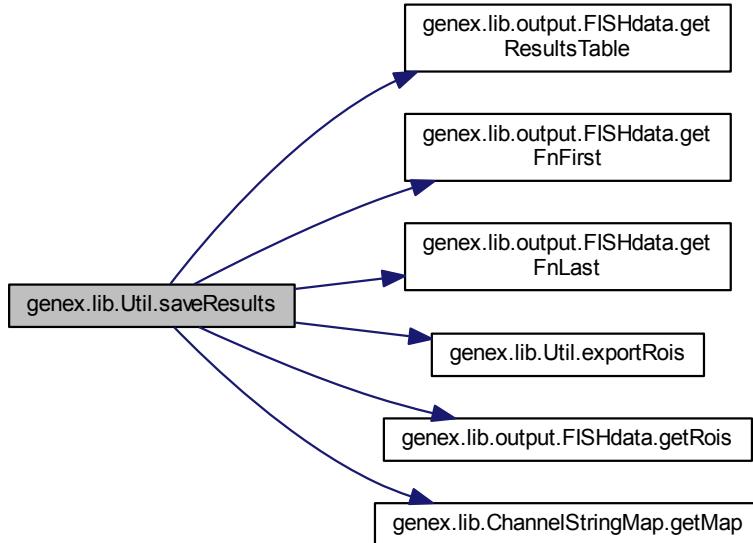

6.46.2.3 void genex.lib.Util.saveResults (FISHdata data, String descriptor, Boolean exportRoi)

Save results and rois to a CSV-file to a directory set in [ParamDefines.CSV_DIR](#). If both fnFirst and fnLast are identical, the data is saved to fn-[dapi|signal].csv, else to fnFirst-fnLast-[dapi|signal].csv

Parameters

<i>data</i>	FISHdata results table and rois
<i>descriptor</i>	String - additional description, e.g. "dapi", "signals"
<i>exportRoi</i>	boolean - save roi?

Here is the call graph for this function:

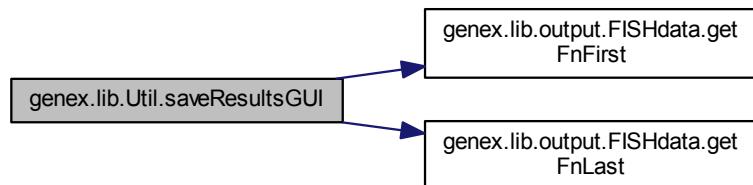

6.46.2.4 void genex.lib.Util.saveResultsGUI (FISHdata *dapiData*, FISHdata *sigData*) [package]

Helper method to save results table presents directory selection window, constructs file path and calls `saveAs()` method for writing the table to the disk.

Parameters

<i>dapiData</i>	helper object with results table and extrois, dapi channel
<i>sigData</i>	helper object with results table and extrois, dapi channel

Here is the call graph for this function:

6.46.3 Member Data Documentation

6.46.3.1 `String genex.lib.Util.dir = prefs.get(ParamDefines.CSV_DIR, prefs.get(ParamDefines.LAST_INPUT_DIR, ""))`
[package]

6.46.3.2 `final Preferences genex.lib.Util.prefs = Preferences.userRoot().node(ParamDefines.PREFS_ROOT)`
[package]

- class [genex.lib.imagerreader.FileImgReader](#)

Packages

- package [genex.lib.imagerreader](#)
-

7.18 src/genex/lib/imagereader/ImageReader.java File Reference

Classes

- interface [genex.lib.imagereader.ImageReader](#)

Packages

- package [genex.lib.imagereader](#)

7.19 src/genex/lib/imagereader/RGBUtils.java File Reference

Classes

- class [genex.lib.imagereader.RGBUtils](#)

Packages

- package [genex.lib.imagereader](#)

7.20 src/genex/lib/imagereader/ScreenImgReader.java File Reference

Classes

- class [genex.lib.imagereader.ScreenImgReader](#)

Packages

- package [genex.lib.imagereader](#)

7.21 src/genex/lib/ObjectFilter.java File Reference

Classes

- class [genex.lib.ObjectFilter](#)

Packages

- package [genex.lib](#)

7.22 src/genex/lib/output/FISHdata.java File Reference

Classes

- class [genex.lib.output.FISHdata](#)
-

Packages

- package [genex.lib.output](#)

7.23 src/genex/lib/output/Results.java File Reference

Classes

- class [genex.lib.output.Results](#)

Packages

- package [genex.lib.output](#)

7.24 src/genex/lib/params/ChannelInfo.java File Reference

Classes

- class [genex.lib.params.ChannelInfo](#)

Packages

- package [genex.lib.params](#)

7.25 src/genex/lib/params/ImageDirInfo.java File Reference

Classes

- class [genex.lib.params.ImageDirInfo](#)

Packages

- package [genex.lib.params](#)

7.26 src/genex/lib/params/InputGuiMain.java File Reference

Classes

- class [genex.lib.params.InputGuiMain](#)

Packages

- package [genex.lib.params](#)
-

7.27 src/genex/lib/params/InputGuiUtils.java File Reference

Classes

- class [genex.lib.params.InputGuiUtils](#)

Packages

- package [genex.lib.params](#)

7.28 src/genex/lib/params/ParamDefines.java File Reference

Classes

- class [genex.lib.params.ParamDefines](#)

Packages

- package [genex.lib.params](#)

7.29 src/genex/lib/RoiLabeler.java File Reference

Classes

- class [genex.lib.RoiLabeler](#)

Packages

- package [genex.lib](#)

7.30 src/genex/lib/Segmenation.java File Reference

Classes

- class [genex.lib.Segmenation](#)

Packages

- package [genex.lib](#)

7.31 src/genex/lib/SigChannel.java File Reference

Classes

- class [genex.lib.SigChannel](#)

Channel-specific methods for hybridization signals, extends the [Channel](#) class.

Packages

- package [genex.lib](#)

7.32 src/genex/lib/SignalRoi.java File Reference

Classes

- class [genex.lib.SignalRoi](#)

Packages

- package [genex.lib](#)

7.33 src/genex/lib/SignalStats.java File Reference

Classes

- class [genex.lib.SignalStats](#)

Packages

- package [genex.lib](#)

7.34 src/genex/lib/threshold/AbstractThresholdFactory.java File Reference

Classes

- interface [genex.lib.threshold.AbstractThresholdFactory](#)

Packages

- package [genex.lib.threshold](#)

7.35 src/genex/lib/threshold/CSVWriter.java File Reference

Classes

- class [genex.lib.threshold.CSVWriter](#)

Packages

- package [genex.lib.threshold](#)
-

7.36 src/genex/lib/threshold/IJAutoThreshold.java File Reference

Classes

- class [genex.lib.threshold.IJAutoThreshold](#)

Packages

- package [genex.lib.threshold](#)

7.37 src/genex/lib/threshold/IJAutoThresholdFactory.java File Reference

Classes

- class [genex.lib.threshold.IJAutoThresholdFactory](#)

Packages

- package [genex.lib.threshold](#)

7.38 src/genex/lib/threshold/SnellThreshold.java File Reference

Classes

- class [genex.lib.threshold.SnellThreshold](#)
Implementation of Violet Snell segmentation.

Packages

- package [genex.lib.threshold](#)

7.39 src/genex/lib/threshold/SnellThresholdFactory.java File Reference

Classes

- class [genex.lib.threshold.SnellThresholdFactory](#)

Packages

- package [genex.lib.threshold](#)

7.40 src/genex/lib/threshold/Threshold.java File Reference

Classes

- interface [genex.lib.threshold.Threshold](#)
-

Packages

- package [genex.lib.thresholder](#)

7.41 src/genex/lib/Util.java File Reference

Classes

- class [genex.lib.Util](#)

Packages

- package [genex.lib](#)

7.42 src/genex/SignalProcessor.java File Reference

Classes

- class [genex.SignalProcessor](#)

Packages

- package [genex](#)

7.43 src/GenExParams_.java File Reference

Classes

- class [GenExParams_](#)

7.44 src/GenExPlugin_.java File Reference

Classes

- class [GenExPlugin_](#)

Plugin entry class.
